

SUMMARY MONTHLY SAFETY REPORT 3
for
ACTIVE SUBSTANCE: PF-07302048 (BNT162b2)

ATC CODE: J07BX03¹

AUTHORISATION PROCEDURE in the EU: Centralised

INTERNATIONAL BIRTH DATE (IBD):² 19 December 2020

EUROPEAN UNION REFERENCE DATE (EURD): 21 December 2020

INTERVAL COVERED BY THIS REPORT:

01 FEBRUARY 2021 through 28 FEBRUARY 2021

DATE OF THIS REPORT: 12 MARCH 2021

Report Prepared by: Worldwide Medical & Safety

Pfizer - BioNTech

The information contained in this document is proprietary and confidential. Any disclosure, reproduction, distribution, or other dissemination of this information outside of Pfizer and BioNTech, their Affiliates, their Licensees, or Regulatory Agencies is strictly prohibited. Except as may be otherwise agreed to in writing, by accepting or reviewing these materials, you agree to hold such information in confidence and not to disclose it to others (except where required by applicable law), nor to use it for unauthorized purposes.

¹ Temporary ATC code.

² It corresponds to the earliest conditional approval date.

EXECUTIVE SUMMARY

This is the 3rd Summary Monthly Safety Report (SMSR) for PF-07302048 [Coronavirus disease 2019 (COVID-19) mRNA Vaccine, hereafter referred to as BNT162b2)], covering the reporting interval 01 February 2021 through 28 February 2021.

BNT162b2 is a white to off-white frozen dispersion (pH: 6.9 - 7.9), provided as concentrate for dispersion for injection (sterile concentrate) as multidose vial to be diluted before use. The multidose vial contains 6 doses of 0.3 mL after dilution; low dead-volume syringes and/or needles should be used in order to extract 6 doses from a single vial. The low dead-volume syringe and needle combination should have a dead volume of no more than 35 microlitres. If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial. Each dose contains 30 micrograms of BNT162b2 embedded in lipid nanoparticles (LNPs). The vaccine also contains (4-hydroxybutyl)azanediylbis(hexane-6,1-diyl)bis(2-hexyldecanoate) (ALC-0315), 2-[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide (ALC-0159), 1,2-Distearoyl-sn-glycero-3-phosphocholine (DSPC), cholesterol, potassium chloride, potassium dihydrogen phosphate, sodium chloride, disodium hydrogen phosphate dihydrate, sucrose and water for injections as excipients.

BNT162b2 is highly purified single-stranded, 5'-capped mRNA produced using a cell-free in vitro transcription from the corresponding DNA templates, encoding the viral spike (S) protein of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). The nucleoside-modified mRNA is formulated in LNPs, which enable delivery of the RNA into host cells to allow expression of the SARS-CoV-2 S antigen. The vaccine elicits both neutralizing antibody and cellular immune responses to the spike (S) antigen, which may contribute to protection against COVID-19.

BNT162b2 is indicated for active immunisation to prevent COVID-19 caused by SARS-CoV-2 virus, in individuals 16 years of age and older. No dosage adjustment is required in elderly individuals ≥ 65 years of age. It is administered intramuscularly in the deltoid muscle after dilution as a series of 2 doses (0.3 mL each) at greater than or equal to 21 days (preferably 3 weeks) apart.

It is estimated that approximately 126,212,580 doses of BNT162b2 were shipped worldwide from the receipt of the first temporary authorisation for emergency supply on 01 December 2020 through 28 February 2021 and that approximately 59,939,685 doses of BNT162b2 were shipped worldwide during the current reporting interval from 01 February 2021 through 28 February 2021.

BNT162b2 has received temporary authorisation for emergency supply in 28 countries and conditional marketing authorisation approval in 39 countries globally.

The RSI for this SMSR is the BNT162b2 CDS Version 1.0, dated 12 February 2021, in effect at the end of the reporting period. After the data-lock point of this SMSR, on 02 March 2021, the CDS was updated with the following safety-related changes: Diarrhoea, Pain in extremity (arm) and Vomiting were added as adverse reactions in Section 4.8 Undesirable effects.

During the reporting period, the following safety topics and signals were addressed:

1. Diarrhoea was evaluated and was added to the RSI as an adverse reaction;*
2. Vomiting was evaluated and was added to the RSI as an adverse reaction;*
3. Delayed syncope was evaluated and determined not to be a risk;
4. Eye pain and Eye swelling were evaluated and determined not to be risks;
5. Hearing loss and Tinnitus were evaluated and determined not to be risks;
6. Dizziness was evaluated and subsequently subsumed in an evaluation of vaccine stress--related responses that is ongoing;
7. Immune thrombocytopenia was evaluated and determined not to be a risk;
8. Facial paralysis was evaluated and determined not to be a risk at this time; but will be re-evaluated once final safety data from the Study C4591001 is available in mid-April 2021;
9. Herpes Zoster evaluation is ongoing;
10. Paraesthesia and Dysaesthesia were evaluated subsequently subsumed in an evaluation of vaccine stress-related responses that is ongoing;
11. Tachycardia was subsumed in an evaluation of vaccine stress-related responses that is ongoing;
12. Guillain-Barre syndrome was a safety topic determined not to be a validated signal;
13. Myocarditis and pericarditis were safety topics determined not to be a validated signal;
14. Severe cutaneous adverse reactions were safety topics determined not to be a validated signal.

* Diarrhoea and Vomiting were determined as identified risks (not important for the purpose of inclusion in the Risk Management Plans and Pharmacovigilance Plans); the related events were added as adverse reactions to the RSI after the data-lock point of this SMSR, on 02 March 2021.

Based on the new safety and efficacy/effectiveness data from the reporting interval for BNT162b2, the benefit-risk profile of BNT162b2 remains favorable.

1. INTRODUCTION

This is the 3rd SMSR for PF-07302048 (COVID-19 mRNA Vaccine, hereafter referred to as BNT162b2), covering the reporting interval 01 February 2021 through 28 February 2021. The format and content of this SMSR is in accordance with the EMA coreRMP19 Guidance (EMA/544966/2020) and, as applicable, with ICH Guideline E2C (R2) Periodic Benefit-Risk Evaluation Report [Step 5, January 2013] considering the information for the evidence from post-EUA/conditional marketing authorisation approval data sources.

BNT162b2 is a white to off-white frozen dispersion (pH: 6.9 - 7.9), provided as concentrate for dispersion for injection (sterile concentrate) as multidose vial to be diluted before use. The multidose vial contains 6 doses of 0.3 mL after dilution; low dead-volume syringes and/or needles should be used in order to extract 6 doses from a single vial. The low dead-volume syringe and needle combination should have a dead volume of no more than 35 microlitres. If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial. Each dose contains 30 micrograms of BNT162b2 (embedded in LNPs). The vaccine also contains ((4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate) (ALC-0315), 2-[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide (ALC-0159), 1,2-Distearoyl-sn-glycero-3-phosphocholine (DSPC), cholesterol, potassium chloride, potassium dihydrogen phosphate, sodium chloride, disodium hydrogen phosphate dihydrate, sucrose and water for injections as excipients.

BNT162b2 is highly purified single-stranded, 5'-capped mRNA produced using a cell-free in vitro transcription from the corresponding DNA templates, encoding the viral spike (S) protein of SARS-CoV-2. The nucleoside-modified mRNA is formulated in LNPs, which enable delivery of the RNA into host cells to allow expression of the SARS-CoV-2 S antigen. The vaccine elicits both neutralizing antibody and cellular immune responses to the spike (S) antigen, which may contribute to protection against COVID-19.

BNT162b2 is indicated for active immunisation to prevent COVID-19 caused by SARS-CoV-2 virus, in individuals 16 years of age and older. No dosage adjustment is required in elderly individuals ≥ 65 years of age. It is administered intramuscularly in the deltoid muscle after dilution as a series of 2 doses (0.3 mL each) at greater than or equal to 21 days (preferably 3 weeks) apart.

Pfizer is responsible for the preparation of the SMSR on behalf of the MAH BioNTech according to the Pharmacovigilance Agreement in place. Data from BioNTech will be included in the report when applicable.

A complete list of the finalized SMSRs is provided in Table 1 below.

Table 1. List of SMSRs

| SMSR Number | Reporting Period |
|-------------|---|
| 1 | 01 December 2020 Through 31 December 2020 |
| 2 | 01 January 2021 Through 31 January 2021 |

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

2. WORLDWIDE APPROVAL OR AUTHORISATION STATUS

BNT162b2 received first temporary authorisation for emergency supply under regulation 174 in the UK on 01 December 2020 and is currently authorised for emergency use in 28 countries.

BNT162b2 received first regulatory conditional marketing authorisation approval in Switzerland on 19 December 2020 and is currently conditionally approved in 39 countries.

Details of the current authorisation/approval status are presented in [Appendix 4](#).

3. ACTIONS TAKEN IN THE REPORTING INTERVAL FOR SAFETY REASONS

On 05 February 2021 Health Canada requested to issue a joint Pfizer-Health Canada Health Product Risk Communication to communicate revisions to Product Monograph (addition of 6-dose vial information and text on anaphylaxis). Final HPRC was approved on 08 February 2021.

There were no withdrawals for safety reasons during the reporting interval.

4. CHANGES TO REFERENCE SAFETY INFORMATION

The RSI for this SMSR is the BNT162b2 CDS Version 1.0, dated 12 February 2021, in effect at the end of the reporting period which is located in [Appendix 1](#).

After the data-lock point of this SMSR, on 02 March 2021, the CDS was updated with the following safety-related changes made: Diarrhoea, Pain in extremity (arm) and Vomiting were added as adverse reactions from post-authorisation experience in Section 4.8 Undesirable effects.

5. ESTIMATED EXPOSURE AND USE PATTERNS

5.1. Cumulative and Interval Exposure Data

It is not possible to determine with certainty the number of individuals who received BNT162b2 during the period of this review. Estimated worldwide shipped doses may serve as a reasonable indicator of subject exposure.

With these caveats in mind, it is estimated that:

- approximately 126,212,580 doses of BNT162b2 were shipped worldwide from the receipt of the first temporary authorisation for emergency supply on 01 December 2020 through 28 February 2021;
- approximately 59,939,685 doses of BNT162b2 were shipped worldwide during the current reporting interval from 01 February 2021 through 28 February 2021.

The estimated cumulative number of shipped doses of BNT162b2 by region³ based on data provided in the shipment tracker (b) (4)⁴ from the receipt of the first temporary authorisation for emergency supply on 01 December 2020 through 28 February 2021, are summarized in Table 2.

Table 2. Cumulative Estimated Shipped Doses of BNT162b2 by Region Worldwide

| Region/Country/Other | % of Doses | Total Number of Shipped Doses |
|---|---------------|-------------------------------|
| Europe | (b) (4) | (4) |
| European Union ^a (27) | | |
| European Free Trade Association ^a (3) | | |

| Other Countries | | |
| Africa | | |
| Total | 100.0% | 126212580 |

- a. In this Region BNT162b2 was conditionally approved;
- b. In this Region BNT162b2 received authorisation for emergency supply;
- c. Includes: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan;
- d. In this Region BNT162 received authorisation for emergency supply; in Colombia BNT162b2 is also shipped for COVAX;
- e. In this Region BNT162b2 received authorization for emergency supply, except for South Korea where BN6162b2 is shipped for COVAX.

³ Currently there are no available data that allow to estimate exposure by gender and age group.

⁴ The (b) (4) is the most accurate tracker of shipment used as data source for all the Regions and Countries; US shipment data not available in the (b) (4) were taken from the (b) (4) (b) (4).

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

The estimated interval number of shipped doses of BNT162b2 by region⁵ based on data provided in the shipment tracker (b) (4)⁶ from 01 February 2021 through 28 February 2021, are summarized in Table 3.

Table 3. Interval Estimated Shipped Doses of BNT162b2 by Region Worldwide

| Region/Country/Other | % of Doses | Total Number of Shipped Doses |
|---|---------------|-------------------------------|
| Europe | (b) | (4) |

6. DATA IN SUMMARY TABULATIONS

6.1. Reference Information

The MedDRA version 23.1 was used to code adverse events/reactions in summary tabulations.

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

6.2. Cumulative and Interval Summary Tabulations from Post-Marketing Data Sources⁷

As per EMA PRAC assessment report (Product No. EMEA/H/C/005735/MEA/002.1) received on the second SMSR (01 Jan 2021 to 31 Jan 2021), the MAH should specify the last date that EudraVigilance data were accessed for the purposes of preparing future SMSR.

Cases from EudraVigilance are downloaded with a 3-day delay, therefore for example cases with a Eudravigilance availability date of 28 February 2021 were accessed and downloaded on 03 March 2021. However, among cases received or downloaded during the reporting period, only those having a complete workflow cycle in the safety database (meaning they progressed to Distribution or Closed workflow status) are included in that month's SMSR. This approach prevents the inclusion of cases that are not fully processed hence not accurately reflecting final data. Each month, Pfizer applies a Late condition process that retrieves cases received in the previous reporting period/s but not included in that month's SMSR due to lack of completeness, in order to include them in the current SMSR, therefore ensuring that no cases are excluded from inclusion in the SMSRs.

- [Appendix 2](#) and [Appendix 2.1](#) respectively provide interval and cumulative numbers of case reports (serious and non-serious, medically confirmed and non-medically confirmed) received from post-marketing authorisation data sources,⁷ overall, by sex, country, age groups and in special populations, and summary tabulations of events by PT and SOC respectively for the interval and cumulative periods.
- The cumulative data include all data up to 28 February 2021 while the interval data are for the period from 01 February 2021 to 28 February 2021.
- [Appendix 2.2](#) provides an interval summary tabulation of case reports with DMEs from post-marketing data sources.⁷
- [Appendices 2.3](#) and [2.4](#) provide data stratified by country. In these appendices, spontaneous cases (including regulatory authority and literature cases) are presented separately from non-interventional cases:
 - [Appendix 2.3](#) provides a cumulative and interval summary tabulation of cases by medically confirmed and non-medically confirmed status (fatal, serious and non-serious).
 - [Appendix 2.4](#) provides a cumulative and interval summary tabulation of fatal cases.
- [Appendix 2.5](#)⁸ and [Appendix 2.6](#) provide a cumulative and interval summary tabulation of adverse reactions from post-marketing authorisation data sources⁷ respectively by PT

⁷ This refers to post-EUA/conditional marketing authorisation approval data sources.

⁸ Due to a technical formatting issue, 1 blank page (92) appears in this Appendix; the total data are however correctly displayed.

and by HLT organized according to SOC. Please refer to [Appendix 2.5.1](#)⁹ and [Appendix 2.6.1](#) for data per country.

Adverse events totals presented in [Appendix 2](#), [Appendix 2.1](#) and for safety topic evaluations in [Section 9.5](#) may differ from those presented in [Appendix 2.5](#) and [Appendix 2.6](#), due to the fact that [Appendix 2.5](#) and [Appendix 2.6](#) only display the number of serious and non-serious reactions from spontaneous sources, serious reactions from non-interventional studies and from solicited sources as described above, whereas [Appendix 2](#), [Appendix 2.1](#) and the safety topic evaluations includes all reported events.

[Appendix 2.5.2](#),¹⁰ [Appendix 2.5.3](#)¹¹ and [Appendix 2.5.4](#) were added to include a cumulative and interval summary tabulation of adverse events from post-authorisation data sources⁷ by PT per country, stratified respectively for age, gender and relevant co-morbidities.

Available relevant information with regard to the differences in vaccination prioritization in EU countries,¹² US¹³, UK and ROW¹⁴ was taken into account in the evaluation of adverse events trends, clusters or signals.

⁹ Due to a technical formatting issue, 8 blank pages (154, 164, 200, 277, 531, 656, 672 and 686) appear in this Appendix; the total data are however correctly displayed.

¹⁰ Due to a technical formatting issue, 5 blank pages (142, 316, 785, 801 and 931) appear in this Appendix; the total data are however correctly displayed.

¹¹ Due to a technical formatting issue, 2 blank pages (68 and 177) appear in this Appendix; the total data are however correctly displayed.

¹⁴ WHO Roadmap for Prioritizing Population Groups for Vaccines against COVID-19; ACIP COVID-19 Vaccines Working Group, Phased Allocation of COVID-19 Vaccines (Dec 01, 2020); JCVI updated interim advice on priority groups for COVID-19 vaccination (Sept 25, 2020)

7. MEDICATION ERRORS

Cases potentially indicative of medication errors¹⁵ that occurred in the reporting period are summarized below.

- Number of cases: 858 (3.6% of 23,558 cases, the total PM⁷ dataset) of which 644 (75.1%) are medically confirmed, compared to 872 (6%) in the second monthly report of which 74.5% were medically confirmed). Out of the 858 cases, 13 cases describing medication errors occurring in an unspecified number of individuals, and 3 additional cases, describing medication errors occurring with co-suspects were determined to be non-contributory and are not included in the discussion.
- Number of relevant medication error cases: 842
Number of relevant events: 1189.
- Number of medication errors by country:
 - There were 393 cases describing medication errors, which occurred in the EU/EEA countries [France (139), Czech Republic (87), Germany (50), Italy (25), Finland (21), Portugal (18), Sweden (10), Austria (8), Greece, Spain and Poland (5 each), Norway and Denmark (4 each), Romania (3), Belgium, Croatia and Slovakia (2 each), Lithuania, Slovenia and Ireland (1 each)].
 - There were 449 cases with medication errors from other countries [US (332), UK (67), Canada (16), Puerto Rico (12), Chile (7), Mexico (4), Israel (3), Switzerland and Northern Mariana islands (2 each), Angola, Costa Rica, Oman, Saudi Arabia (1 each)].

¹⁵ MedDRA (version 23.1) Higher Level Terms: Accidental exposures to product; Product administration errors and issues; Product confusion errors and issues; Product dispensing errors and issues; Product label issues; Product monitoring errors and issues; Product preparation errors and issues; Product selection errors and issues; Product storage errors and issues in the product use system; Product transcribing errors and communication issues, OR Preferred Terms: Accidental poisoning; Circumstance or information capable of leading to device use error; Circumstance or information capable of leading to medication error; Contraindicated device used; Deprescribing error; Device use error; Dose calculation error; Drug titration error; Expired device used; Exposure via direct contact; Exposure via eye contact; Exposure via mucosa; Exposure via skin contact; Failure of child resistant product closure; Inadequate aseptic technique in use of product; Incorrect disposal of product; Intercepted medication error; Intercepted product prescribing error; Medication error; Multiple use of single-use product; Product advertising issue; Product distribution issue; Product prescribing error; Product prescribing issue; Product substitution error; Product temperature excursion issue; Product use in unapproved therapeutic environment; Radiation underdose; Underdose; Unintentional medical device removal; Unintentional use for unapproved indication; Vaccination error; Wrong device used; Wrong dosage form; Wrong dosage formulation; Wrong dose; Wrong drug; Wrong patient; Wrong product procured; Wrong product stored; Wrong rate; Wrong route; Wrong schedule; Wrong strength; Wrong technique in device usage process; Wrong technique in product usage process.

In some instances, clusters of medication errors were reported, generally by HCPs, suggesting that rather than a systematic issue worldwide, these errors were repeated mistakes at certain vaccination locales:

- In the EU/EEA region there were 11 clusters, the largest in France (96 cases), Czech Republic (83 cases), Germany (25 cases) and in Finland (12 cases);
- In other countries there were 19 clusters, the largest in US (14 cases), Puerto Rico (10 cases), Chile (7 cases) and in Canada (2 cases).
- Medication error PTs in the EU and ex-EU¹⁶
 - In the EU/EEA countries, a total of 652 PTs indicative of medication errors were reported; those events reported at least thrice included: Poor quality product administered (243), Product temperature excursion issue (141), Product preparation error (96), Incorrect route of product administration (69), Inappropriate schedule of product administration (25), Underdose (22), Product preparation issue (21), Product administered at inappropriate site (9), Wrong technique in product usage process (7), Incorrect dose administered (5) and Circumstance or information capable of leading to medication error (3).¹⁷
 - In other countries, a total of 537 medication errors were reported; those events reported at least thrice included: Inappropriate schedule of product administration (173), Underdose (53), Poor quality product administered (51), Product administered to patient of inappropriate age (37), Incorrect route of product administration (31), Product temperature excursion issue (24), Circumstance or information capable of leading to medication error (22), Product preparation error (18), Product administered at inappropriate site, Product preparation issue, and Wrong technique in product usage process (14 each), Accidental exposure to product (13), Exposure via skin contact (12), Incomplete course of vaccination (11), Accidental overdose and Wrong product administered (8 each), Incorrect dose administered (7), Incorrect dosage administered (5), Product dose omission issue and Product administration error (4 each), Product storage error (3).

¹⁶ As per EMA assessment received on the first SMSR, the MAH was requested to should keep medication errors under close scrutiny especially within the EU context and discuss whether the current product information is sufficiently clear or whether there is room for improvement. The Rapporteurs should be notified immediately in case of unexpected findings or trends.

¹⁷ The PTs reported less than 3 times included: Accidental overdose and Medication error (2 each) and Accidental exposure to product, Exposure via skin contact, Intercepted product preparation error, Lack of vaccination site rotation, Product administered to patient of inappropriate age, Product administration error and Transcription medication error (1 each).

- Medication errors by seriousness:
 - Serious (24); out of these, 12 serious medication errors¹⁸ were reported in EU/EEA countries [Croatia, France, Germany, Lithuania and Romania (2 each), and Denmark and Italy (1 each)].
Seriousness criteria were hospitalization and disability or permanent damage (1 event each) and important medical events (10 events); all but 1 event were medically confirmed.
 - Non-serious (1165).
- Medication error case outcomes:
 - Fatal (5)¹⁹ (cross-ref with [Section 9.5.3, Death](#)),
 - Resolved/resolving (167, of which 85 are serious),
 - Resolved with sequelae (3, of which 2 are serious)
 - Not resolved (90, of which 58 are serious),
 - Unknown (577, of which 21 are serious).

Medication Errors Harm Analysis

Among the medication error cases, the following scenarios, categorized according to the EMA guidance “Good practice guide on recording, coding, reporting and assessment of medication errors” (EMA/762563/2014) were described:

- Medication errors associated with harm [i.e., resulting in adverse reaction(s)] were reported in 17²⁰ cases (15 in the second SMSR);

¹⁸ PTs: Incorrect route of product administration (3), Accidental overdose, Inappropriate schedule of product administration, Incorrect dose administered, Incorrect route of product administration, Lack of vaccination site rotation, Poor quality product administered, Product administration error, Product preparation issue, Product temperature excursion issue, Underdose (1 each).

¹⁹ As per EMA PRAC assessment report (Product No. EMEA/H/C/005735/MEA/002.1), MAH should provide details regarding the fatal cases of medication errors and more clearly indicate whether or not the medication error caused or contributed to serious adverse event or outcome. All the medication errors reported in these cases were assessed as non-serious occurrences with an unknown outcome; based on the available information including the causes of death, the relationship between the medication error and the death is weak.

²⁰ Two cases reported both medication errors with harm and without harm.

- Medication errors without harm [i.e. not resulting in adverse reaction(s)]²¹ were reported in 774 cases (in 321 of them there were co-reported AEs) compared to 713 cases of which 288 included co-reported AEs in the second SMSR;
- Intercepted medication errors were reported in 2 cases, compared to 2 cases in the second SMSR;
- Potential medication errors were reported in 51 cases, compared to 106 cases in the second SMSR.

Medication errors associated with harm (21 medication errors in 17 cases)

There were 8 cases from the EU/EEA area [Sweden (4), France (2), Germany and Italy (1 each)] and 9 from non-EU/EEA countries [US (7), UK (2)].

Serious medication errors

In 4 cases (involving 5 medication error events), serious medication errors potentially contributed to the occurrence of serious adverse events.

- Seizure, Circulatory collapse, Tachycardia, Loss of consciousness, Presyncope, Somatic symptom disorder, Facial paralysis, Hypotension, Vertigo, and Paraesthesia occurred in a 30-year-old woman 15 minutes after she received a dose of vaccine exposed to temperature excursion (PTs Product temperature excursion issue, Poor quality product administered). No antiepileptics treatment were administered since “seizure self-limited once the woman was in flat position with legs lifted”. The events seizure, paraesthesia, facial paralysis, circulatory collapse, tachycardia, and unconsciousness resolved after treatment including fluid and electrolyte replacement solution and paracetamol; the outcome was unknown for the remaining events (cross-reference with [Section 9.5.2](#)).
- Myositis, Vaccination site pain, Neuralgic amyotrophy and Back pain were reported in a 52-year-old man after receiving the vaccine (PT Lack of vaccination site rotation). The events were considered complications from vaccine absorption by the allergy and toxicology specialists. The events (except vaccination site pain) were resolving after treatment at the time of the report.
- Pain/arthralgia accompanied by nausea and paraesthesia occurred to a 51-year-old woman after she received the vaccine intramuscularly towards the humeral head and not in the deltoid muscle (PT Product administration error); the events were resolving after treatment.
- The vaccine was administered 2 cm below the deltoid muscle (PT Product administered at inappropriate site) in an adult woman who experienced “constantly itching scabbing

²¹ AEs may be co-reported in a case, but they are not considered to be a result of the medication error.

over granulating and oozing 6 weeks post injection”. The outcome of the events was unknown.

Non-serious medication errors

In 13 cases (involving 16 medication error events), non-serious medication errors potentially contributed to the occurrence of non-serious adverse events.

Administration of undiluted vaccine (2 events, 1 case)

- A 41-year-old woman experienced anal incontinence the night after she received a dose of undiluted vaccine. The subject recovered the following day; it was unknown if treatment was given.

Errors in the route of administration (11 events, 10 cases)

- This error occurred in 5 cases in the EU/EEA area (4 from Sweden and 1 from France) and in 5 US cases. The vaccine was administered subcutaneously (6 events); “not intramuscularly” (3 events), and through other routes (IV, oral, 2 events). Local vaccination site reactions mainly included erythema, swelling, pruritus, and warmth and pain.

Errors of vaccination at the wrong anatomical site (3 events, 3 cases)

- This error occurred in 3 cases (from the US). The vaccination was not administered in the deltoid (PT Product administered at inappropriate site). Vaccination site erythema and Pain in extremity (2 each), Skeletal injury and Contusion (1 each) were reported.

Medication errors without harm²⁰ (1113 medication errors in 774 cases)

These medication error PTs describe errors occurring during 1 or more steps of the vaccination process: preparation, administration, or scheduling of second dose.

Overall, there were

- 381 cases from the EU/EEA area [France (137), Czech Republic (86), Germany (49), Italy (24), Finland (21), Portugal (18), Austria (8), Sweden (6), Greece and Poland (5 each), Denmark and Spain (4 each), Norway and Romania (3 each), Belgium, Croatia and Slovakia (2 each), Lithuania and Slovenia (1 each)] and
- 393 from non-EU/EEA countries [those with more than 1 medication error included the US (285), the UK (64), Canada (14), Puerto Rico (12), Chile (7), Mexico (3) Northern Mariana Islands, Israel and Switzerland (2 each)].

Vaccine preparation errors (320 events, 2 of which were serious): events mainly described errors in storage conditions or during dilution (before use).

- *Temperature excursion (167 events):* in the majority of the events, the vaccine was left at room temperature or in the refrigerator for a longer time than specified in the RSI; no adverse events were reported upon vaccine administration.
- *Incorrect dilution (138 events):* Dilution was performed either with a smaller volume of normal saline (8 events), or with a larger volume of normal saline (6 events) than instructed; dilution with improper volume was reported with a variable total number of available doses after dilution from a single vial (15 events). There were 97 events of dilution performed with a different solvent (water for injection for 96 events) rather than normal saline. In another 12 events the vaccine was administered without performing the dilution; no adverse events were reported upon vaccine administration.
- *Other preparation errors (15 events).*

Vaccine administration errors (793 events, 17 of which were serious): events mainly described errors in administration of vaccine dose not adequately prepared (see Preparation subset), errors in the volume or dosage of the vaccine administered, errors in administering the second dose in less than 21 days or after more than 21 days, and errors in route of administration.

- *Administration after inadequate preparation (294 events, all non-serious):* these events referred to vaccine administered after inadequate preparation: dilution performed with water for injection instead of normal saline (95 events); vaccine administered incorrect thawing procedure (left at room temperature for a longer time than the one specified in the RSI), or thawed and inadvertently refrozen (166 events); and other 33 errors including presence of particulates [single black particles (4), small white floating particles (2), piece of latex (1) and another not further detailed particle (1)] after vaccine administration.
- *Incorrect interval between doses (148 events, 2 of which serious²²):* the second dose of the vaccine was administered at less than 21 days of interval (98 events); interval between the first and the second dose ranged between 0 day (3 events) and 18 days, with the majority of the second doses administered between the 15th and the 18th day after the first dose (51 events); the second dose was administered after more than 21 days (50 events).

²² PTs Inappropriate schedule of product administration (2), Asthenia, Chills, COVID-19, Diarrhoea, Drug ineffective, Fatigue, Headache, Lymphadenopathy, Nausea, Off label use, Pain, Pyrexia, Vomiting (1 each).

- *Errors in the route of administration (93 events, of which 4 serious²³):* the vaccine was administered subcutaneously (55 events)²⁴; intravenously (14 events), parenterally without any further detail (9 events); and through other routes (15 events).
- *Errors in the volume administered (78 events, of which 3 serious²⁵):* partial doses were administered due to leakage, syringe or needle malfunction (74 events); higher volume of right dose of vaccine was administered (4 events).
- *Paediatric Individuals <16 Years of Age (38 events, of which 3 serious²⁶):* the vaccine was inadvertently administered to paediatric individuals below 16 years (see [Section 9.5.4 Use in Paediatric Individuals <16 Years of Age](#)).²⁷
- *Dose of vaccine not administered (33 events, of which 1 serious²⁸):* the second dose was not administered at the scheduled date. In 15 instances, the dose was not administered either because the vaccinees were recovering from AEs occurred after first dose or they became COVID-19 positive or due to the impossibility to attend at the scheduled date; only saline was injected or the syringe was empty (2 each); in the remaining instances the second dose was not administered for not further detailed causes (14 events).
- *Accidental exposure to vaccine (27 events, all non-serious):* all involved skin exposure.
- *Errors in vaccine dosage (25 events, of which 2 serious):* these errors include administration of vaccine at higher concentrations (10 events) and at lower concentrations (6 events) than recommended and 7 events in which the vaccine was administered undiluted or a third dose was administered (2 events, 1 case).
- *Vaccination site other than deltoid muscle (20 events, of which 1 serious²⁹):* the vaccine was administered in the vaccinee's arm but not in the deltoid muscle (14 events); the

²³ PTs Chills, Deep vein thrombosis, Drug ineffective, Erythema, Fatigue, Feeling abnormal, Feeling hot, Feeling of body temperature change, Gait disturbance, Headache, Hyperaemia, Lymphadenopathy, Malaise, Myalgia, Pain in extremity, Rash pruritic, Suspected COVID-19, Vaccination site discolouration, Vaccination site pain, Vaccination site thrombosis.

²⁴ In 1 case route was reported as partly subcutaneous and partly intramuscular.

²⁵ PTs Accidental overdose and Product administration error (2 each), Cough, Fatigue, Headache, Incorrect dose administered, Malaise, Pain in extremity, Pyrexia, Underdose, Vaccination site pain (1 each).

²⁶ PTs Headache (3), Product administered to patient of inappropriate age (3), Pyrexia and Pain in extremity (2 each), Arthralgia, Back pain, Chills, Mastitis, Myalgia, Peripheral swelling, Swelling, Vertigo and Wheezing (1 each).

²⁷ Out of these 38 cases, 18 were not further detailed in [Section 9.5.4](#) as reporting information was not consistent for paediatric subjects (e.g. age category of adult or medical history and medications clearly for adults).

²⁸ PTs Product dose omission issue, Drug ineffective, COVID-19.

²⁹ PTs Neurological symptom, Neuralgic amyotrophy, Pain in extremity, Paraesthesia, Joint dislocation, Chest discomfort, Pain, Wrong technique in product usage process.

administration site was in the leg, thigh or in the gluteus (4 events), in the hand and in the abdomen (1 event each).

- *Wrong vaccine administered (10 events, all non-serious)*: the vaccinees received one dose of Moderna vaccine and 1 dose of BioNTech-Pfizer vaccine (8 events); in 2 instances the vaccinees were told to receive one dose of Moderna vaccine, but the vaccination card reported the BioNTech-Pfizer vaccine was administered.
- *Other vaccine administration errors (28 events, of which 1 serious³⁰)*: the majority of the events were indicative of issues with syringes and needles or related to the use of concomitant drugs³¹ (7 events each); expired vaccine (3 events³²) and not further detailed in the 11 remaining ones.

Intercepted medication errors (2 medication errors in 2 cases)

There were 2 cases of which 1 was from the EU/EEA area (Norway) and 1 from non-EU/EEA countries (US).

In the first case a woman of unknown age who had received her first dose in the morning, was called in the afternoon of the same day for the second dose because her last name was misspelt; her second dose was rescheduled. In the second case, a physician prepared a syringe with a double amount of vaccine; the dose was not administered.

Potential medication errors (53 medication errors in 51 cases)

There were 3 cases from the EU/EEA area [Czech Republic, Ireland and Spain (1 each)] and 50 from non-EU/EEA countries [US (43), Canada (2) and 1 case each from Israel, Mexico, Oman, Saudi Arabia and the UK].

- Potential dosing interval error (53 events, all non-serious): events mainly described potential errors in the scheduling for the second dose not according to the 21 days interval. In some instances, the scheduled date for the second dose is planned at 4 weeks interval; in other instances, the planned date was scheduled at a different interval for vaccine unavailability or for individual unavailability.

Some medication errors are expected to occur despite written instructions and educational activities for HCPs administering the vaccine. The number and seriousness of the reported medication errors do not indicate a need for additional mitigation activity.

³⁰ PTs Headache, Pyrexia, Fatigue, Vaccination site pain, Cough, Malaise, Pain in extremity, Incorrect dose administered, Underdose (1 each).

³¹ Co-suspect in 1 instance.

³² Three events (in 2 cases) described administration of the vaccine after its expiry date; in the first case, the vaccine was administered 5 days after the expiry date; no information was available for the second case.

8. GENERAL OVERVIEW

A total of 23,558 case reports (13,389 medically confirmed and 10,169 non-medically confirmed) containing 91,934 events fulfilled criteria for inclusion in this SMSR. Refer to [Appendix 2](#) for the summary tabulations of all cases received during the current reporting period.

PRESENTATION OF CASE CHARACTERISTICS

Table 5. General Overview: Selected Characteristics of All Cases Received During the Reporting Interval

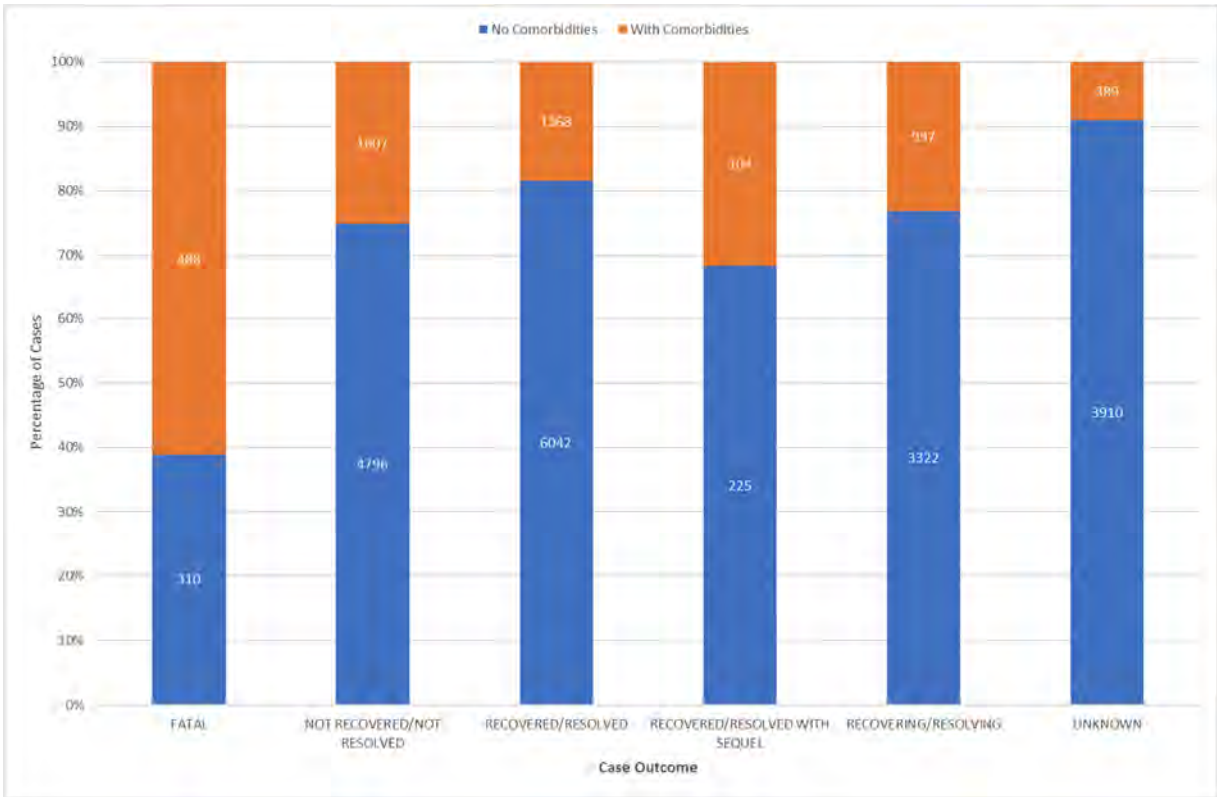

| | Characteristics | Relevant cases (N=23558) |
|---|------------------------------------|--------------------------|
| Gender: | Female | 17040 |
| | Male | 5317 |
| | No Data | 1201 |
| Age range (years): 0.06 -107 years Mean = 52.6 years n = 20433 | ≤ 17 | 91 ^a |
| | 18-30 | 2654 |
| | 31-50 | 7579 |
| | 51-64 | 4526 |
| | 65-74 | 2234 |
| | ³ 75 | 3544 |
| | Unknown | 2927 ^b |
| Case outcome: | Resolved/Resolving | 11729 |
| | Resolved with sequelae | 329 |
| | Not resolved at the time of report | 6403 |
| | Fatal | 798 |
| | Unknown | 4299 |
| Presence of relevant comorbidities | Yes | 4953 ^c |
| | No | 18605 |

- Including 27 cases for which a paediatric age was initially reported but that they re-evaluated as not consistent with this age upon review (see [Table 12](#), Use in Paediatric Individuals <16 Years of Age) and 17 breastfed babies for which paediatric age was reported;
- Including 14 breastfed babies for which age was not reported;
- Cases retrieved applying the criteria in place to identify the reports involving the special populations of Immunocompromised patients, Patients with autoimmune or inflammatory disorders, Frail patients with comorbidities (e.g. COPD, diabetes, chronic neurological disease, cardiovascular disorders) described as Missing Information in [Table 12](#). One of these cases was made invalid hence excluded from the discussion in [Table 12](#) below.

Case outcome by age group, gender and presence of relevant comorbidities is presented in [Figure 1](#), [Figure 2](#) and [Figure 3](#). Across all age groups, there were more females than males reporting adverse events. The fatal cases reported more comorbidities, but this is expected considering that the majority of fatal outcomes occurred in patients 75 years and older as shown in [Figure 2-B](#) (please also see *Death* in [Table 11](#) and *Frail patients with co-morbidities e.g. COPD, diabetes, chronic neurological disease, cardiovascular disorders*, described as Missing Information in [Table 12](#)).

ADVERSE EVENT DATA

As shown in Figure 4, the MedDRA SOCs containing the greatest number of events ($\geq 2\%$) were General disorders and administration site conditions (28,420), Nervous system disorders (15,446), Musculoskeletal and connective tissue disorders (9872), Gastrointestinal disorders (8274), Skin and subcutaneous tissue disorders (4919), Respiratory, thoracic and mediastinal disorders (5574), Infections and infestations (2879), Injury, poisoning and procedural complications (2722), Investigations (2120) and Cardiac disorders (1918). Of note, multiple adverse events may be reported in a single case.

Figure 4. General Overview: Total Number of Events by MedDRA SOC and Event Seriousness

The overall safety evaluation includes a review of the most frequently reported events by SOC and by the PT for events reported in ($\geq 2\%$) of all cases during the reporting interval as compared to the cumulative period since the first temporary authorisation for emergency supply on 01 December 2020.

Table 6. Events Reported in $\geq 2\%$ * Cases

| | 01 February 2021 Through 28 February 2021 | Cumulatively Through 28 February 2021 |
|--------------------------------|--|--|
| MedDRA SOC MedDRA PT | AEs (AERP%) N = 23558 | AEs (AERP%) N = 42086 |

- a. Listed or consistent with listed AEs in current RSI;
- b. Added to the CDS after the data-lock point of this SMSR, on 02 March 2021;
- c. Listed per case processing conventions; for discussion of relevant cases of Drug ineffective/COVID-19 see [Table 11](#), *Lack of Efficacy* subsection;
- d. Consistent with anaphylactic reactions listed in the current RSI;

* Reporting proportion (% of total cases) in the current reporting period.

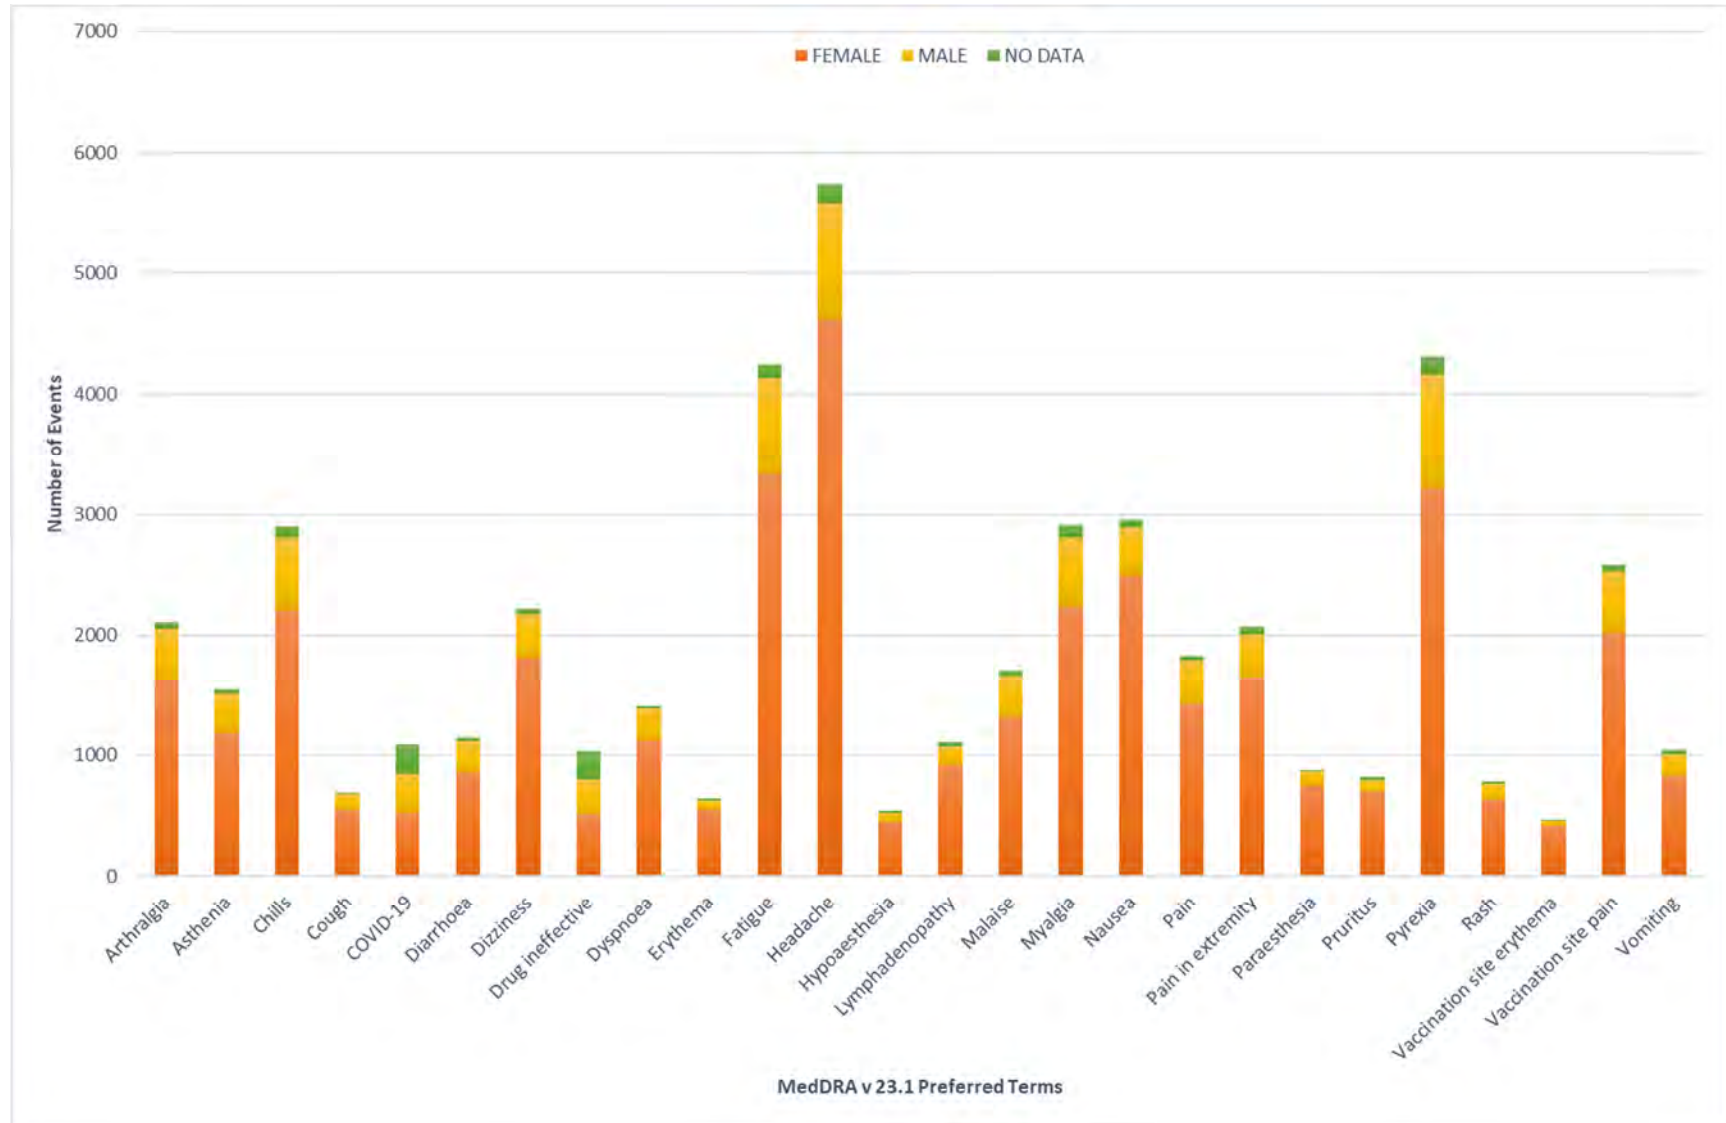

Most of the frequently reported events are listed or consistent with listed events as per the current RSI. Of note, the frequently reported events Dizziness, Paraesthesia, Syncope and Tachycardia, not listed as per the current RSIs, are signals addressed during the reporting period (see [Section 9.2](#)).

During the reporting interval, the distribution of the AEs reported in more than 2% of the cases by gender is presented in [Figure 5](#). The observed imbalance in the female gender distribution reflects the imbalance in the gender distribution of the cases received in the reporting period.

The distribution of the AEs reported in more than 2% of the cases by age group and by SOC is showed in [Figure 6](#) and [Figure 7](#). The largest number of events is reported overall in the 31-50 years age group.

As per EMA PRAC assessment report (Product No. EMEA/H/C/005735/MEA/002.1) received on the second SMSR, the MAH was requested to discuss the findings regarding side effects (particularly fever and muscle ache) reported more frequent and severe:

- a. *following the 1st dose;*
- b. *following the 2nd dose;*

in vaccinees that previously had a (PCR confirmed) COVID-19 infection, including any implications for the product information.

MAH Response

The available data on subjects in the Phase 2/3 portion of Study C4591001 with evidence of prior infection with SARS-CoV-2 as determined by NAAT or N-binding assay (at Visit 1) suggest no clinically meaningful difference with regard to clinical profile of the reported events. Out of a total safety population of approximately 44,000 subjects of both arms at the time of the analyses (14 November 2020), 545 BNT162b2-vaccinated subjects and 580 placebo recipients, were identified as baseline SARS-CoV-2 positive at Visit 1 and had safety data available for analysis.

Overall, there were no meaningful differences in the incidences or severity of reactogenicity, or incidences of AEs or SAEs between the baseline positive and negative subject groups. For any systemic reactions across all the measured reactions and doses, in the same reactogenicity baseline SARS-CoV-2 status subsets, 70.1% compared to 77.7% reported at least 1 systemic event in those positive or negative at baseline, respectively.

In participants positive at baseline for SARS-CoV-2, the reactogenicity reported at the first dose was generally higher than after the second dose. Fever was reported in 12.3% and 7.5% after Dose 1 and Dose 2, respectively, and muscle pain was reported 29.9% and 27.8% after Dose 1 and Dose 2, respectively. Overall, the rate of reactogenicity for each event measured was comparable to the rates for those negative at baseline for SARS-CoV-2. For example, muscle pain after any dose in baseline SARS-CoV-2 positive participants was 39.6% compared to 38.2% in individuals negative for SARS-CoV-2 at baseline, while fever after any dose in baseline SARS-CoV-2 positive participants was 16.9% as compared to 14.1% in baseline negative participants. Hence, for systemic events the rate of reactogenicity was higher after Dose 1 than Dose 2, but the overall rate was similar to the reactogenicity rates observed in participants negative for SARS-CoV-2.

With regard to the AE profile, among the safety data of ~38,000 participants³³ with AEs collected from Dose 1 to 1 month after Dose 2 and for which a median of 2 months of follow-up after Dose 2 was conducted, the frequency of AEs were 22.0% and 27.1% in those who were positive (n=545 BNT162b2, n=580 placebo) and negative (n=17,841 BNT162b2, n=17,808 placebo) at baseline, respectively. Of the AEs reported, 16.5% and 21.0% were related AEs in those positive and negative at baseline, respectively. Most of these events

³³ Population that met the requirement for the US EUA.

were local and systemic reactogenicity. SAEs were reported in 4 participants (0.7%) in the BNT162b2 recipients positive at baseline compared to 97 participants (0.5%) in participants negative at baseline.

The safety profile (ie, reactogenicity and AEs) did not show a clinically meaningful difference on the basis of baseline SARS-CoV-2 status and did not suggest any clinical concern about BNT162b2 vaccination in individuals previously exposed to SARS-CoV-2. As demonstrated by the data included in the MAA, overall Dose 2 had a higher frequency of systemic reactogenicity across all participants. Based on this analysis, the MAH did not recommend an update to the EU SmPC.

9. SIGNAL AND RISK EVALUATION

9.1. Literature Review

Please refer to [Appendix 6](#) for a summary description of the interval literature review that is performed for the purpose of signal detection. There were no literature articles identifying new safety topics that would represent signals for BNT162b2 during the reporting interval.

9.2. Overview of Signals During the Reporting Interval

Signals addressed during the reporting interval are presented below in Table 7.

Table 7. Overview of Signals

| Signal | Status | Category |
|----------------------------------|---------|---------------------------------|
| Vomiting | Closed | Identified Risk (Not Important) |
| Diarrhoea | Closed | Identified Risk (Not Important) |
| Eye pain/Eye swelling | Closed | No Risk |
| Delayed Syncope | Closed | No Risk |
| Hearing Loss and Tinnitus | Closed | No Risk |
| Immune thrombocytopenia | Closed | No Risk |
| Dizziness | Ongoing | Under evaluation |
| Facial paralysis | Ongoing | Under evaluation |
| Paraesthesia | Ongoing | Under evaluation |
| Herpes Zoster | Ongoing | Under evaluation |
| Tachycardia | Ongoing | Under evaluation |
| Vaccine stress-related responses | Ongoing | Under evaluation |

[Appendix 3](#) provides a summary of the safety topics and signals addressed during the reporting interval and [Appendix 3.1](#) an evaluation of these safety topics and signals.

As per EMA PRAC assessment report (Product No. EMEA/H/C/005735/MEA/002.1) received on the second SMSR, the following cumulative overviews were performed for:

- Safety evaluation of Immune thrombocytopenia ([Appendix 3.2](#));
- Safety evaluation of Hearing loss and Tinnitus ([Appendix 3.3](#));
- Safety evaluation of Insomnia with discussion on duration ([Appendix 3.4](#));
- Safety evaluation of Dizziness ([Appendix 3.5](#));
- Safety evaluation of Guillain-Barré syndrome ([Appendix 3.6](#)).

9.3. Summary of Safety Concerns

Table 8 summarises the comprehensive list of important risks and missing information reflected in risk management and pharmacovigilance plans globally for BNT162b2 at the beginning of the reporting period. The pharmacovigilance and risk management activities implemented for the safety concerns by Pfizer on behalf of BioNTech are global.

Table 8. Safety Concerns

| | |

| | Use in Immunocompromised Patients ^b |
| | Use in Frail Patients With Co-Morbidities (e.g. COPD, Diabetes, Chronic Neurological Disease, Cardiovascular disorders) ^b |
| | Use in Patients With Autoimmune or Inflammatory Disorders ^b |
| | Interaction With Other Vaccines ^b |
| | Long-Term Safety Data ^b |
| | Use in Paediatric Individuals <16 Years of Age ^c |
| | Vaccine Effectiveness ^c |

- a. As per both the EU RMP Version 1.0, dated 21 December 2020 and the US PVP Version 0.3, dated 20 January 2021;
- b. As per the EU RMP Version 1.0, dated 21 December 2020;
- c. As per the US PVP Version 0.3, dated 20 January 2021.

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

9.4. Summary of Adverse Events of Special Interest (AESIs)

Please refer to [Appendix 5](#) for the list of the company’s AESIs for BNT162b2. Please refer to [Appendix 5.1](#) for the observed versus expected analysis for AESIs.^{34,35}

The company’s AESI list takes into consideration the lists of AESIs from the following expert groups and regulatory authorities: Brighton Collaboration (SPEAC), ACCESS protocol, US CDC (preliminary list of AESI for VAERS surveillance), MHRA (unpublished guideline).

The AESI terms are incorporated into a TME list and include events of interest due to their association with severe COVID-19 and events of interest for vaccines in general.

The AESI list includes MedDRA PTs, HLTs, HLGTs or MedDRA SMQs and can be changed as appropriate based on the evolving safety profile of the vaccine.

9.5. Evaluation of Safety Concerns

Evaluation of new information collected from post-marketing data sources⁷ for BNT162b2 during the interval reporting period for important identified and important potential risks, AESIs, special situations and missing information is provided below in Section 9.5.1, [Section 9.5.2](#), [Section 9.5.3](#) and [Section 9.5.4](#).

9.5.1. Evaluation of Important Identified and Important Potential Risks

Table 9 below presents the evaluation of new information received during the interval reporting period from post-marketing data sources⁷ for the important identified and important potential risks of BNT162b2.

Table 9. Risks Evaluation for BNT162b2

| Safety Risk | Post-Marketing Cases Evaluation ^a Total Number of Cases in the Reporting Period (N=23558) |
|---|--|
| Important Identified Risk | |
| Anaphylaxis ^c <i>Search criteria: Anaphylactic reaction SMQ (Narrow and Broad, with the algorithm applied), selecting relevant cases according to BC criteria</i> | Number of cases from the Anaphylactic reaction SMQ (Narrow and Broad) search strategy, applying the MedDRA algorithm based on all terms in the SMQ: 1156 ³⁶ (4.9% compared to 3.4% of the total PM dataset of the previous SMSR), of which 907 were medically confirmed and 249 were non-medically confirmed; <ul style="list-style-type: none"> Number of events: 2868; |

³⁴ It should be noted that for the O/E analyses, the numbers of doses of vaccine administered had been estimated based on publicly available data from health authorities in various regions.

³⁵ As per EMA PRAC assessment report (Product No. EMEA/H/C/005735/MEA/002.1) sSpecific O/E analysis for arrhythmias, deafness, hypertension, tinnitus, sudden hearing loss were also included in [Appendix 5.1](#).

³⁶ One additional case was made invalid after the DLP due to lack of minimum valid criteria to process the case.

| | <p>Expected analysis was submitted to EMA in a LEG procedure as per EMA PRAC assessment report (Product No. EMEA/H/C/005735/MEA/002) received on the first SMSR. Following EMA feedback, the response to the Post-Authorisation Measure LEG-022 Assessment will be submitted in conjunction with the current SMSR.</p> <p>Conclusion: Evaluation of BC cases Level 1 and 2 as well as 3 and 4 did not reveal any significant new safety information. Anaphylaxis is appropriately described in the product labeling as are non-anaphylactic hypersensitivity events. Surveillance will continue.</p> |
| Important Potential Risk | |
| <p>Vaccine-Associated Enhanced Disease (VAED) Including Vaccine-Associated Enhanced Respiratory Disease (VAERD)^{b,c}</p> | <p>VAED is a modified and/or severe presentation of an infectious disease affecting individuals exposed to the wild-type pathogen after having received vaccine designed to prevent infection.³⁷</p> <p>As noted by the Brighton Collaboration, there is currently no uniformly accepted definition of VAED (or VAERD) and the BC working group considers that a definitive case of VAED (Level 1 diagnostic certainty) cannot be ascertained with current knowledge of the mechanisms of pathogenesis of the condition; they have provided guidance on levels of diagnostic certainty of VAED cases based on various laboratory and clinical findings.</p> <p>No post-authorized AE reports have been identified as cases of VAED/VAERD, therefore, there is no observed data at this time. An expected rate of VAED is difficult to establish so a meaningful observed/expected analysis cannot be conducted at this point based on available data. The feasibility of conducting such an analysis will be re-evaluated on an ongoing basis as data on the virus grows and the vaccine safety data continues to accrue.</p> <p>The search criteria utilised to identify potential cases of VAED for this SMSR includes PTs indicating a lack of effect of the vaccine and medical disorders chosen because they are PTs potentially indicative of severe or atypical COVID-19.</p> <p>Overview</p> <ul style="list-style-type: none"> • Number of cases based on search strategy: 73 (0.3% of the total PM dataset, compared to 0.4% of the previous reporting period), all serious (of which 44 are medically confirmed)^h; • Country of incidence: UK (38), US (8), Germany (7), France, Spain (4 each), Italy (3), Denmark (2); the remaining 7 cases originated from 7 different countries. • Gender: female (40), males (26), unknown (7). |

| Safety Risk | Post-Marketing Cases Evaluation ^a Total Number of Cases in the Reporting Period (N=23558) |
|-------------|--|
| | <p>suggestive of COVID-19 pneumonia; she died within 24 hours due to septic shock and multi-organ failure. Vaccination failure was coded in this case due to coding convention criteria.</p> <ul style="list-style-type: none"> An 85-year-old female subject, with unspecified thyroid disorder and on psychotropic drugs for unspecified diagnosis and food supplements, developed vomiting and “aggravated food intake”, 7 days after the 2nd dose. She was transferred to the hospital, where she was diagnosed with massive pulmonary embolism with saturation 50%; the day after, she had a positive PCR COVID-19 test and she died on the same day. Pulmonary embolism in this COVID-19 positive subject may be due to COVID-19 or to an unspecified or unknown underlying medical condition. <p>VAED may present as severe or unusual clinical manifestations of COVID-19. Overall, there were 52 subjects with test-confirmed COVID-19 following one or both doses of the vaccine. 33 of the 52 cases were severe, resulting in hospitalization or death. None of the 52 cases could be definitively considered as having VAED/VAERD.</p> <p>Conclusion: In this review of subjects with COVID-19 following vaccination, based on the current evidence, VAED/VAERD remains a theoretical risk for the vaccine Surveillance will continue.</p> |

- Please note that this corresponds to evidence from post-EUA/conditional marketing authorisation approval data sources;
- As per both the EU RMP Version 1.0, dated 21 December 2020 and the US PVP, Version 0.3, dated 20 January 2021;
- Search criteria: Standard Decreased Therapeutic Response Search AND PTs Dyspnoea; Tachypnoea; Hypoxia; COVID 19 pneumonia; Respiratory Failure; Acute Respiratory Distress Syndrome; Cardiac Failure; Cardiogenic shock; Acute myocardial infarction; Arrhythmia; Myocarditis; Vomiting; Diarrhoea; Abdominal pain; Jaundice; Acute hepatic failure; Deep vein thrombosis; Pulmonary embolism; Peripheral Ischaemia; Vasculitis; Shock; Acute kidney injury; Renal failure; Altered state of consciousness; Seizure; Encephalopathy; Meningitis; Cerebrovascular accident; Thrombocytopenia; Disseminated intravascular coagulation; Chillblains; Erythema multiforme; Multiple organ dysfunction syndrome; Multisystem inflammatory syndrome in children;
- Multiple episodes of the same PT event were reported with a different clinical outcome within some cases hence the sum of the events outcome exceeds the total number of PT events.
- As per the EU RMP Version 1.0, dated 21 December 2020; the US PVP was updated during the reporting period with the finalization of the US PVP, Version 0.3, dated 20 January 2021, to include Anaphylaxis as an Important identified risk.
- Subjects with age ranged between 18 and 64 years;
- Subjects with age equal to or above 65 years.
- Note that 24 additional cases, retrieved with this search strategy, have been excluded from the discussion because, upon review, they cannot be considered true lack of efficacy cases: 23 cases, where the PT Drug ineffective was coded, reported that the subjects developed SARS-CoV-2 infection during the early days from the first dose (days 1 – 13); the vaccine has not had sufficient time to stimulate the immune system and, consequently, the development of a vaccine preventable disease during this time is not considered a potential lack of effect of the vaccine; in 1 case the PT Drug ineffective has been removed after DLP because the subject experienced COVID-19 like symptoms but the COVID-19 test (PCR) was negative.

|---|--|
| <p><i>Search criteria: PTs Facial paralysis, Facial paresis</i></p> | <p><i>MAH was requested to thoroughly follow-up cases reporting facial paralysis including the outcome and if recovered the days till recovery to estimate the total duration of this ADR. Once a reliable estimate of duration is available from case reports, the MAH is requested to include information of duration of facial paralysis complaints in the product information. The MAH was also requested to indicate when the results of the assessments of the facial paralysis cases in the clinical study data will be available.</i></p> <p>A cumulative case series evaluation of this topic, with cases assessed according to BC case definition and criteria, was included in the second SMSR (reporting period 01-31 January 2021) and will be repeated as warranted.</p> <p>A review of the interval cases reported during the current reporting period follows.</p> <ul style="list-style-type: none"> • Number of cases: 323^l (1.4% of the total PM dataset, compared to 0.7% of previous reporting period), 228 medically confirmed and 95 non-medically confirmed; • Country of incidence: UK (83), US (65), Italy (37), France (27), Spain (17), Germany (11), Sweden (10), Ireland (9), Israel (8), Austria (7), Finland (6), Cyprus, Hungary and Portugal (5 each), Mexico (4), Canada and Croatia (3 each), Malta, Netherlands, Norway, Poland and Romania (2 each); the remaining 8 cases originated from 8 different countries; • Subjects' gender: female (209), male (103), unknown (11); • Subjects' age group (n=304): Adult^c (221), Elderly^d (82), Infant (1); ^{e,n} • Number of relevant events:^m 323, of which 319 serious, 4 non-serious; • Reported relevant PTs: Facial paralysis (283), Facial paresis (40); • Relevant event onset latency (n = 286): Range from <24 hours to 29 days, median 2 days; • Relevant event outcome: resolved/resolving (138), resolved with sequelae (1), not resolved (129) and unknown (55); • Duration of events till resolution was reported in 39 out of 67 occurrences with outcome of resolved; it ranged from 10 minutes to 1 month and 3 days, with a median value of 1 day. <p>* Please see Appendix 5.1 for Observed versus Expected analysis of Facial paralysis/Facial paresis (Bell's palsy).</p> <p>Interval conclusion: No new significant safety information was identified based on a review of these cases, or of the Observed versus Expected analysis. Surveillance will continue.</p> <p>Update to case series review presented in the second SMSR (reporting period 01-31 January 2021): The 139 spontaneous reports resulting from the MedDRA version 23.1 search of the MAH safety database for PTs <i>Facial paralysis</i> or <i>Facial paresis</i> were reviewed for any updates in outcome resulting from follow-up activity through 26 February 2021</p> |

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

Table 10. AESIs Evaluation for BNT162b2

| AESIs ^a Category | Post-Marketing Cases Evaluation ^b Total Number of Cases in the Reporting Period (N=23558) |
|--|---|
| | <p>(As-of date 27 February 2021). Thirty of the 139 reports were reversioned due to updates and 2 reports were made invalid. The 30 reversioned reports were reviewed to understand the nature of the updates. Of the 30 reversioned reports, 4 reports had a change in outcome:</p> <p>AER (b) (6), PT Facial paralysis was changed to Facial paresis and outcome changed from Not recovered to Recovering</p> <p>AER (b) (6), PT Facial paralysis outcome changed from Not recovered to Recovering</p> <p>AER (b) (6), PT Facial paralysis outcome changed from Unknown to Not recovered</p> <p>AER (b) (6), PT Facial paralysis outcome changed from Not recovered to Unknown</p> <p>These updates based on follow-up do not substantially change the MAH’s evaluation or conclusion. Follow-up efforts to obtain detail, including outcome for AEs, especially AESIs, reported for the vaccine are in place. Evaluations of facial palsy will continue to consider duration of facial paresis/paralysis and will propose updates to labeling language regarding facial palsy if warranted.</p> <p>Overall Conclusion: Taking all available information into consideration, including the unblinded clinical study C4591001 data (DLP 14 November 2020), the post-authorisation data and the comparison of observed case reports to the expected number of events (O/E analyses), the available information does not support a conclusion of a causal association between Bell’s palsy and the vaccine. This topic will continue to be monitored. Causality assessment will be further evaluated following availability of additional data from the remaining clinical study C4591001, which will be unblinded for final analysis approximately mid-April 2021. Additionally, non-interventional post-authorisation safety studies, C4591011 and C4591012 are expected to capture data on a sufficiently large vaccinated population to detect an increased risk of Bell’s palsy in vaccinated individuals. The timeline for conducting these analyses will be established based on the size of the vaccinated population captured in the study data sources by the first interim reports (due 30 June 2021). Study C4591021, pending protocol endorsement by EMA, is also intended to inform this risk.</p> |

- a. For the complete list of the AESIs, please refer to Appendix 5;
- b. Please note that this corresponds to evidence from post-EUA/conditional marketing authorisation approval data sources;
- c. Subjects with age ranged between 18 and 64 years;
- d. Subjects with age equal to or above 65 years;
- e. Subjects with age ranged between 12 and less than 18 years;
- f. Multiple episodes of the same PT event were reported with a different clinical outcome within some cases hence the sum of the events outcome exceeds the total number of PT events;
- g. Subjects with age ranged between 1 (28 days) and 23 months;
- h. Subjects with age ranged between 2 and 11 years;
- i. To increase clinical relevance of the review, compared to previous SMSR these PTs were moved to COVID-19 category;
- j. To increase clinical relevance of the review, compared to previous SMSR this PT was moved from the Immune-mediated/Autoimmune Category to its appropriate specific body system category;
- k. As per EMA PRAC assessment report received on the second SMSR, EMA has requested an analysis of haemorrhagic disorders through review of PTs present in a specific SMQ query in addition to the PTs Haemorrhage and Haemorrhagic disorder already included in the AESIs/TME list; comparison with reporting

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

|--------------------------------|---|
|--------------------------------|---|

proportion of Haematological events reported in the previous reporting period is therefore not applicable for this Category;

- l. Twenty-four additional cases were excluded from the analysis as they were not cases of peripheral facial nerve palsy (BC Category 5) because they described other disorders (stroke, cerebral haemorrhage or transient ischaemic attack); 1 case was excluded from the analysis because it was invalid due to an unidentifiable reporter;
- m. If a case included both PT Facial paresis and PT Facial paralysis, only the PT Facial paralysis was considered in the descriptions of the events as it is most clinically important;
- n. This UK case report received from the UK MHRA described a 1-year-old subject who received the vaccine, and had left postauricular ear pain that progressed to left-sided Bell’s palsy 1 day following vaccination that had not resolved at the time of the report;
- o. This PT not included in the AESIs/TME list was included in the review as relevant for ACCESS protocol criteria;
- p. New search strategy was implemented since this third SMSR for Stroke to include, in addition to the PT Cerebrovascular accident already included in the AESIs/TME List, other reported PTs that are indicative of stroke and were not in the previous search strategy, and to differentiate between ischemic and hemorrhagic strokes; for this reason the comparison with the reporting proportion of previous reporting period is not applicable for this AESI category;
- q. This UK case report received from the UK MHRA described a 7-year-old female subject who received the vaccine and had stroke (unknown outcome); no follow-up is possible for clarification.

9.5.3. Evaluation of Special Situations

Table 11 below presents the evaluation of new information received during the current reporting period from post-marketing data sources for BNT162b2 in relation to special situations (Death, Lack of Efficacy and Vaccine Interactions).

Table 11. Evaluation of Special Situations for BNT162b2

| Topic | Post-Marketing Cases Evaluation ^a Total Number of Cases in the Reporting Period (N=23558) |
|-------|--|
| Death | <p>Overview</p> <ul style="list-style-type: none"> • Number of fatal cases: 794³⁸ (3.4% of the total PM dataset, compared to 2.8% of the total PM cases received in the previous reporting period) of which 652 were medically confirmed and 142 non-medically confirmed; • Country of incidence: the majority were from France (140), Germany (132), UK (99), Norway (65), Sweden (56), US (48), Netherlands (44), Belgium (41), Denmark (29), Spain (23); the remaining 117 cases occurred in 21 other countries. • Subject Gender: females (423), males (303), unknown (68); |

³⁸ During the current reporting interval there were 8 additional cases reporting subjects’ death. However, they were excluded from further analysis in this subsection as the death was mentioned as an incidental information only in 3 cases, with none of the reported events presenting a fatal outcome; 2 cases were excluded as it was made invalid; and 3 cases reported foetal death and are reviewed in [Table 12](#) under *Use in Pregnancy and While Breast Feeding*.

| | <ul style="list-style-type: none"> ○ The infection is not confirmed as SARS-CoV-2 through laboratory tests (irrespective of the vaccination schedule). This includes scenarios where LOE is stated or implied, e.g., “the vaccine did not work”, “I got COVID-19”. ○ It is unknown: <ul style="list-style-type: none"> ▪ Whether the subject has received the appropriate series of two doses in correct timing based on the labeling instructions; ▪ How many days have passed since the first dose (including unspecified number of days like a”a few days”, “some days”, etc.); ▪ If 7 days have passed since the second dose of the vaccine administration; ○ The subject experiences a vaccine preventable illness 14 days after receiving the first dose up to and through 6 days after receipt of the second dose. <p>Note: after the immune system as had sufficient time (14 days) to respond to the vaccine, this is considered a potential lack of efficacy even if the vaccination course is not complete.</p> <p>This is the summary of the coding conventions for onset of vaccine preventable disease versus the vaccination date:</p> <table border="1" data-bbox="508 982 1414 1178"> <thead> <tr> <th data-bbox="508 982 808 1037">1st dose (day 1-13)</th> <th data-bbox="808 982 1109 1037">From day 14 post 1st dose to day 6 post 2nd dose</th> <th data-bbox="1109 982 1414 1037">Day 7 post 2nd dose</th> </tr> </thead> <tbody> <tr> <td data-bbox="508 1037 808 1121">Code only the events describing the SARS-CoV-2 infection</td> <td data-bbox="808 1037 1109 1121">Code “Drug ineffective”</td> <td data-bbox="1109 1037 1414 1121">Code “Vaccination failure”</td> </tr> <tr> <td data-bbox="508 1121 808 1178">Scenario Not considered LOE</td> <td data-bbox="808 1121 1109 1178">Scenario considered LOE as “Drug ineffective”</td> <td data-bbox="1109 1121 1414 1178">Scenario considered LOE as “Vaccination failure”</td> </tr> </tbody> </table> <p>Lack of efficacy cases</p> <ul style="list-style-type: none"> • Number of cases³⁹: 856 (3.6 % of the total PM dataset, compared to 7.2% of the previous reporting period) of which 572 were medically confirmed and 284 non -medically confirmed; • Number of lack of efficacy events: 856 [PT: Drug ineffective (840) and Vaccination failure (16)]. • Country of incidence: US (233), UK (180), Germany (120), France (80), Italy (52), Belgium, Romania (28 each), Poland (20), Spain (19), Austria , Israel (16 each), Greece (14), Portugal (9), Denmark (7), Mexico (6), Czech Republic, Sweden (4 each); the remaining 20 cases originated from 11 different countries. | 1 st dose (day 1-13) | From day 14 post 1 st dose to day 6 post 2 nd dose | Day 7 post 2 nd dose | Code only the events describing the SARS-CoV-2 infection | Code “Drug ineffective” | Code “Vaccination failure” | Scenario Not considered LOE | Scenario considered LOE as “Drug ineffective” | Scenario considered LOE as “Vaccination failure” |
| 1 st dose (day 1-13) | From day 14 post 1 st dose to day 6 post 2 nd dose | Day 7 post 2 nd dose | | | | | | | | |
| Code only the events describing the SARS-CoV-2 infection | Code “Drug ineffective” | Code “Vaccination failure” | | | | | | | | |
| Scenario Not considered LOE | Scenario considered LOE as “Drug ineffective” | Scenario considered LOE as “Vaccination failure” | | | | | | | | |

³⁹ One hundred and ninety-six (196) additional cases retrieved in this dataset were excluded from the analysis; upon review, 188 cases cannot be considered true lack of efficacy cases because the PT Drug ineffective was coded but the subjects developed SARS-CoV-2 infection during the early days from the first dose (days 1 – 13); the vaccine has not had sufficient time to stimulate the immune system and, consequently, the development of a vaccine preventable disease during this time is not considered a potential lack of effect of the vaccine; in 5 cases the PT Drug ineffective was removed after DLP because the subjects did not develop COVID-19 infection; in 1 case, reporting Treatment failure and Transient ischaemic attack, the Lack of efficacy PT did not refer to BNT162b2 vaccine; 2 cases have been invalidated in the safety database after DLP.

| | <p>(109), Asthenia (99), Paraesthesia (76), Lymphadenopathy (75), Dyspnoea (66) and Vomiting (65);</p> <ul style="list-style-type: none"> Case outcome: fatal (13 see Table 11, Death), resolved/resolving (765), resolved with sequelae (34), not resolved (555) and unknown (123). <p>Conclusion: The most frequently reported clinical events observed in subjects with autoimmune or inflammatory disorders were consistent with those observed in the overall population. The reporting proportion of unresolved cases (37.2%) and cases resolved with sequelae (2.3%) in subjects with autoimmune or inflammatory disorders is slightly higher compared to the reporting proportion observed in the overall population (27.2% for outcome of not resolved, 1.4% for outcome of resolved with sequelae), while the reporting proportion of cases with fatal outcome in subjects with autoimmune or inflammatory conditions (0.9%) is below the reporting proportion of cases with fatal outcome in the overall population (3.4%). No safety signals have emerged that would be considered specific to this population</p> |
| <p>Use in Frail Patients With Co-morbidities (e.g. COPD, Diabetes, Chronic Neurological Disease, Cardiovascular Disorders)^c</p> | <ul style="list-style-type: none"> Number of cases: 2521^f (10.7% of the total PM dataset, compared to 9.2% of the previous reporting period) of which 1602 were medically confirmed and 919 non-medically confirmed; Case Seriousness: Serious (2008), Non-Serious (513); Country of incidence: UK (735), US (492), France (337), Sweden (149), Germany (126), Spain (113), Italy (80), Norway (76), Denmark (63), Finland (40), Netherlands (37), Austria (36), Ireland and Portugal (35 each), Belgium (33), Greece (18), Czech Republic (17), Canada and Switzerland (10 each), Israel (9), Hungary (8), Croatia, Iceland and Romania (7 each), Malta and Mexico (6 each), Estonia (5), Cyprus and Latvia (4 each), United Arab Emirates (3), Luxembourg and Serbia (2 each); the remaining 9 cases originated from 9 different countries; Gender: Females (1719), Males (774) and Unknown (28); Age (n = 2457) ranged from 5 to 106 years, mean = 66.5 years, median = 72 years; Relevant subjects' medical histories most frequently reported (>20 cases) coded to the PTs: Asthma (880), COPD (242), Dementia (240), Cardiac failure (179), Dementia Alzheimer's type (151), Chronic kidney disease (125), Cognitive disorder (90), Parkinson's disease (73), Pulmonary embolism (63), Renal failure (59), Vascular dementia (45), Cardiac failure congestive (28) and Bronchiectasis (26); Of the 10317 events overall reported, the most frequent (≥100 occurrences) coded to the PTs: Pyrexia (430), Headache (427), Fatigue (390), Dyspnoea (284), Nausea (268), Chills (225), Malaise (201), Dizziness (194), Myalgia (189), Vaccination site pain (167), Pain in extremity (157), Pain (152), Vomiting (147), Arthralgia (143), Asthenia (142), Diarrhoea (118), Death (107) and Cough (100); all these events were consistent with the most frequent events observed in the overall population except for Death; Case outcome: fatal (438, see Table 11, Death), resolved/resolving (1158), resolved with sequelae (47), not resolved (693) and unknown (185). <p>Conclusion: The reporting proportion of not resolved cases (27.5%) and cases resolved with sequelae (1.9%) in frail subjects is similar to the reporting proportion observed in the overall population (27.2% for outcome of not resolved, 1.4% for outcome of resolved with sequelae).</p> |

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

Table 12. Evaluation of Missing Information for BNT162b2

| Missing Information | Post-Marketing Cases Evaluation ^a Total Number of Cases in the Reporting Period (N=23558) |
|---|---|
| | <p>The reporting proportion of cases reporting fatal outcome (17.4%) in frail subjects is higher than the reporting proportion of cases reporting fatal outcome in the overall population (3.4%). This is expected, considering that most of the cases reporting a fatal outcome (82.9%) among the frail subjects involved subjects over 75 years of age who, due to their advanced age and underlying comorbidities, are more likely to die than younger individuals. Underlying comorbidities are likely to be contributory to their deaths.</p> <p><i>As per EMA PRAC assessment report (Product No. EMEA/H/C/005735/MEA/002.1) received on the second SMSR, the MAH was requested to discuss if there is a higher risk on worsened outcome in the particularly frail or elderly patients with underlying morbidities, who are reporting diarrhoea and/or vomiting.</i></p> <p>The reporting proportion of cases reporting Diarrhoea and/or Vomiting (9.4%) in these frail or elderly subjects with underlying morbidities is similar to the reporting proportion observed in the overall population (8.2%); there was no difference in the incidence of serious occurrences (63.8% in frail or elderly subjects with underlying morbidities versus 61.3% of serious occurrences in the overall population) and in the reporting proportion of cases in which these events had an outcome of not resolved or resolved with sequelae, respectively 16.4% and 1.3% in frail subjects, versus 18.3% and 1.6% in the overall population. The reporting proportion of cases in which Diarrhoea and/or Vomiting had a fatal outcome is higher (10.1%) in frail subjects than in the overall population (1.7%); the cases with fatal outcome involved 24 subjects with age ranged from 74 to 96 years (mean 87.5 years, median 89 years) and they had multiple underlying co-morbidities that are likely to be contributory to their deaths.</p> <p>Conclusion: Overall, no risks based on subject frailty have been identified for the vaccine. Pfizer recognizes that severe vomiting and diarrhea may have negative clinical consequences, especially in medically frail subjects. As with all vaccinations, the full safety and efficacy profile of the vaccine should be considered in the context of the health of the individual subject when determining the benefit risk of vaccination.</p> |
| Interaction With Other Vaccines ^c | There were no cases reporting an interaction with other vaccines during the reporting interval (please refer to Table 11 , <i>Vaccine Interactions</i>). |
| Long-Term Safety Data | Not applicable |
| Use in Paediatric Individuals <16 Years of Age ^g | <ul style="list-style-type: none"> • Number of cases: 26^h (0.1% of the total PM dataset, as in the previous reporting period), of which 11 were medically confirmed and 15 were non-medically confirmed, and indicative of administration in paediatric subjects <16 years of age; • Country of incidence: UK (19), US (4), Germany (2), Israel (1); • Cases Seriousness: Serious (16), Non-Serious (10); • Gender: Females (20), Males (3), Unknown (3); • Age (n=26) ranged from 2 months to 15 years, mean = 6.2, median = 5; • Case outcome: resolved/resolving (10), not resolved, and unknown (8 each). • Of the 92 reported events, <ul style="list-style-type: none"> ○ The most frequently reported events (>1 case) were coded to the PTs Product administered to patient of inappropriate age (20, see Section 7 Medication Errors), Off label use (12), Product use |

10. OVERALL BENEFIT-RISK EVALUATION

10.1. Benefits

BNT162b2 is indicated for active immunisation to prevent COVID-19 caused by SARS-CoV-2 virus, in individuals 16 years of age and older.

In the Phase 2/3 portion, approximately 44,000 participants were randomised equally and were to receive 2 doses of COVID-19 mRNA Vaccine or placebo (normal saline) separated by 21 days. The efficacy analyses included participants that received their second vaccination within 19 to 42 days after their first vaccination. Participants are planned to be followed for up to 24 months after Dose 2, for assessments of safety and efficacy against COVID-19.

The population for the analysis of the primary efficacy endpoint included 36,621 participants 12 years of age and older (18,242 in the COVID-19 mRNA Vaccine group and 18,379 in the placebo group) who did not have evidence of prior infection with SARS-CoV-2 through 7 days after the second dose. In addition, 134 participants were between the ages of 16 to 17 years of age (66 in the COVID-19 mRNA Vaccine group and 68 in the placebo group) and 1616 participants 75 years of age and older (804 in the COVID-19 mRNA Vaccine group and 812 in the placebo group).

At the time of the primary efficacy analysis, participants had been followed for symptomatic COVID-19 for in total 2,214 person-years for the COVID-19 mRNA Vaccine and in total 2,222 person-years in the placebo group. There were no meaningful clinical differences in overall vaccine efficacy in participants who were at risk of severe COVID-19 including those with 1 or more comorbidities that increase the risk of severe COVID-19 (e.g. asthma, body mass index (BMI) \geq 30 kg/m², chronic pulmonary disease, diabetes mellitus, hypertension).

The vaccine efficacy information is presented in Table 13.

Table 13. Vaccine efficacy – First COVID-19 occurrence from 7 days after Dose 2, by age subgroup – participants without evidence of infection prior to 7 days after Dose 2 – evaluable efficacy (7 days) population

| First COVID-19 occurrence from 7 days after Dose 2 in participants without evidence of prior SARS-CoV-2 infection* | | | |
|--|---|---|---|
| Subgroup | COVID-19 mRNA Vaccine N ^a = 18,198 Cases n1 ^b Surveillance time ^c (n2 ^d) | Placebo N ^a = 18,325 Cases n1 ^b Surveillance time ^c (n2 ^d) | Vaccine efficacy % (95% CI) ^f |
| All subjects ^e | 8 2.214 (17,411) | 162 2.222 (17,511) | 95.0 (90.0, 97.9) |
| 16 to 64 years | 7 1.706 (13,549) | 143 1.710 (13,618) | 95.1 (89.6, 98.1) |
| 65 years and older | 1 0.508 (3848) | 19 0.511 (3880) | 94.7 (66.7, 99.9) |
| 65 to 74 years | 1 0.406 (3074) | 14 0.406 (3095) | 92.9 (53.1, 99.8) |

Table 13. Vaccine efficacy – First COVID-19 occurrence from 7 days after Dose 2, by age subgroup – participants without evidence of infection prior to 7 days after Dose 2 – evaluable efficacy (7 days) population

| First COVID-19 occurrence from 7 days after Dose 2 in participants without evidence of prior SARS-CoV-2 infection* | | | |
|--|---|---|--|
| Subgroup | COVID-19 mRNA Vaccine N ^a = 18,198 Cases n1 ^b Surveillance time ^c (n2 ^d) | Placebo N ^a = 18,325 Cases n1 ^b Surveillance time ^c (n2 ^d) | Vaccine efficacy % (95% CI) ^f |
| 75 years and older | 0 0.102 (774) | 5 0.106 (785) | 100.0 (-13.1, 100.0) |

Note: Confirmed cases were determined by Reverse Transcription-Polymerase Chain Reaction (RT-PCR) and at least 1 symptom consistent with COVID-19 [*Case definition: (at least 1 of) fever, new or increased cough, new or increased shortness of breath, chills, new or increased muscle pain, new loss of taste or smell, sore throat, diarrhoea or vomiting.]

* Participants who had no serological or virological evidence (prior to 7 days after receipt of the last dose) of past SARS-CoV-2 infection (i.e., N-binding antibody [serum] negative at Visit 1 and SARS-CoV-2 not detected by nucleic acid amplification tests (NAAT) [nasal swab] at Visits 1 and 2), and had negative NAAT (nasal swab) at any unscheduled visit prior to 7 days after Dose 2 were included in the analysis.

- a. N = number of participants in the specified group.
- b. n1 = Number of participants meeting the endpoint definition.
- c. Total surveillance time in 1000 person-years for the given endpoint across all subjects within each group at risk for the endpoint. Time period for COVID-19 case accrual is from 7 days after Dose 2 to the end of the surveillance period.
- d. n2 = Number of subjects at risk for the endpoint.
- e. No confirmed cases were identified in participants 12 to 15 years of age.
- f. Confidence interval (CI) for vaccine efficacy is derived based on the Clopper and Pearson method adjusted to the surveillance time. CI not adjusted for multiplicity.

In the second primary analysis, compared to placebo, efficacy of COVID-19 mRNA Vaccine in participants from first COVID-19 occurrence from 7 days after Dose 2 compared to participants with or without evidence of prior infection with SARS-CoV-2 was 94.6% (95% credible interval of 89.9% to 97.3%) in participants 16 years of age and older.

Additionally, subgroup analyses of the primary efficacy endpoint showed similar efficacy point estimates across genders, racial and ethnic groups, and participants with medical comorbidities associated with high risk of severe COVID-19.

10.2. Risks

Based on pharmacovigilance monitoring activities, since first authorisation, anaphylaxis has been recognised as an important identified risk. Hypersensitivity reactions (other than Anaphylaxis) Diarrhoea, Pain in extremity (arm) and Vomiting were also assessed as identified risks (not important for the purpose of inclusion in the Risk Management Plans and Pharmacovigilance Plans) and added as adverse reactions to the labeling.

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

Based on all available safety and efficacy data for BNT162b2 the benefit-risk profile of the vaccine remains favourable.

10.3. Overall Benefit-Risk

The identified risks associated with the use of BNT162b2 are mitigated through provision of relevant product information in the RSI to support safe use of the product. Risks have been evaluated in the context of the enumerated benefits of the product. Based on the available safety and efficacy data for BNT162b2, the overall benefit-risk profile of BNT162b2 remains favourable.

11. CONCLUSION AND ACTIONS

The MAH will continue to review the safety of BNT162b2, including reports of adverse experiences and will revise the product documents if an evaluation of the safety data yields significant new information.

COVID-19 mRNA Vaccine

CORE DATA SHEET

VERSION 1

PFIZER CONFIDENTIAL

1

FDA-CBER-2021-5683-1081259

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

1. NAME OF THE MEDICINAL PRODUCT

COVID-19 mRNA Vaccine (nucleoside modified) and COMIRNATY are called TRADENAME.

2. QUALITATIVE AND QUANTITATIVE COMPOSITION^{1,2}

This is a multidose vial and must be diluted before use.

One vial (0.45 mL) contains 6 doses of 0.3 mL after dilution, see Section 6.6.

One dose (0.3 mL) contains 30 micrograms of COVID-19 mRNA Vaccine (embedded in lipid nanoparticles).

TRADENAME is highly purified single-stranded, 5'-capped messenger RNA (mRNA) produced using a cell-free *in vitro* transcription from the corresponding DNA templates, encoding the viral spike (S) protein of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).

For the full list of excipients, see Section 6.1.

3. PHARMACEUTICAL FORM^{2,3}

Concentrate for solution for injection.

The vaccine is a white to off-white frozen solution.

4. CLINICAL PARTICULARS

4.1. Therapeutic indications

The following is a representative indication. Locally approved indications may differ.

Active immunization to prevent coronavirus disease 2019 (COVID-19) disease caused by SARS-CoV-2 virus, in individuals 16 years of age and older.⁴

4.2. Posology and method of administration

Posology

Individuals 16 years of age and older

TRADENAME is administered intramuscularly after dilution as a series of 2 doses (0.3 mL each) at greater than or equal to 21 days (preferably 3 weeks) apart.⁵

There are no data available on the interchangeability of TRADENAME with other COVID-19 vaccines to complete the vaccination series. Individuals who have received 1 dose of TRADENAME should receive a second dose of TRADENAME to complete the vaccination series.

Individuals may not be protected until at least 7 days after their second dose of the vaccine.⁶

For further information on efficacy, see Section 5.1.

Pediatric population

The safety and efficacy of TRADENAME in individuals under 16 years of age have not yet been established.

Geriatric population

Clinical studies of TRADENAME include participants 65 years of age and older and their data contributes to the overall assessment of safety and efficacy.⁷ Of the total number of TRADENAME recipients in Study 2 (N=20,033), 17.1% (n=3434) were 65 through 74 years of age and 4.3% (n=860) were 75 years of age and older (see Section 5.1).⁸

Method of administration

Administer TRADENAME intramuscularly in the deltoid muscle after dilution.

Do not inject the vaccine intravascularly, subcutaneously, or intradermally.

After dilution, vials of TRADENAME contain 6 doses of 0.3 mL of vaccine. Low dead-volume syringes and/or needles can be used to extract 6 doses from a single vial. If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial.

Irrespective of the type of syringe and needle:

- Each dose must contain 0.3 mL of vaccine.
- If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 mL, discard the vial and any excess volume.
- Do not pool excess vaccine from multiple vials.

For instructions on the handling, dilution, and dose preparation of the vaccine before administration, see Section 6.6.

4.3. Contraindications

Hypersensitivity to the active substance or to any of the excipients listed in Section 6.1.

4.4. Special warnings and precautions for use

Traceability

In order to improve the traceability of biological medicinal products, the name and the batch number of the administered product should be clearly recorded.

General recommendations

As with all injectable vaccines, appropriate medical treatment and supervision must always be readily available in case of a rare anaphylactic event following the administration of the vaccine.⁹

The administration of TRADENAME should be postponed in individuals suffering from acute severe febrile illness.⁹

Individuals receiving anticoagulant therapy or those with a bleeding disorder that would contraindicate intramuscular injection, should not be given the vaccine unless the potential benefit clearly outweighs the risk of administration.⁹

Immunocompromised persons, including individuals receiving immunosuppressant therapy, may have a diminished immune response to the vaccine.

As with any vaccine, vaccination with TRADENAME may not protect all vaccine recipients.

4.5. Interaction with other medicinal products and other forms of interaction

No interaction studies have been performed.

Do not mix TRADENAME with other vaccines/products in the same syringe.

4.6. Fertility, pregnancy and lactation

Pregnancy

There are limited amount of data from the use of TRADENAME in pregnant women. Animal studies do not indicate direct or indirect harmful effects with respect to pregnancy, embryo/fetal development, parturition, or post-natal development (see Section 5.3).^{10,11} Administration of TRADENAME in pregnancy should be considered when the potential benefits outweigh any potential risks for the mother and fetus.

Lactation

It is unknown whether TRADENAME is excreted in human milk.

Fertility

It is unknown whether TRADENAME has an impact on fertility. Animal studies do not indicate direct or indirect harmful effects with respect to female fertility or reproductive toxicity (see Section 5.3).^{10,11}

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

4.7. Effects on ability to drive and use machines

TRADENAME has no or negligible influence on the ability to drive and use machines. However, some of the effects mentioned under Section 4.8 “Undesirable effects” may temporarily affect the ability to drive or use machines.

4.8. Undesirable effects

Summary of safety profile

The safety of TRADENAME was evaluated in participants 16 years of age and older in 2 clinical studies conducted in the United States, Europe, Turkey, South Africa, and South America.¹² Study BNT162-01 (Study 1) enrolled 60 participants, 18 through 55 years of age. Study C4591001 (Study 2) enrolled approximately 44,000 participants, 12 years of age or older.¹²

In Study 2, a total of 21,720 participants 16 years of age or older received at least 1 dose of TRADENAME and a total of 21,728 participants 16 years of age or older received placebo.¹³

The most frequent adverse reactions in participants 16 years of age and older (in order from highest to lowest frequencies) were pain at the injection site (>80%),¹⁴ fatigue (>60%),¹³ headache (>50%),¹³ myalgia and chills (>30%),¹³ arthralgia (>20%),¹³ pyrexia¹³ and injection site swelling¹⁴ (>10%) and were usually mild or moderate in intensity and resolved within a few days after vaccination. A lower frequency of reactogenicity events was associated with greater age.¹⁵

Table 1. Adverse Drug Reactions^{13,14,16}

| System Organ Class | Adverse Drug Reactions |
|--|---|
| Blood and lymphatic system disorders | Lymphadenopathy |
| Immune system disorders | Anaphylaxis Hypersensitivity reactions (e.g., rash, pruritus, urticaria, angioedema) |
| Nervous system disorders | Headache |
| Gastrointestinal disorders | Nausea |
| Musculoskeletal and connective tissue disorders | Arthralgia Myalgia |
| General disorders and administration site conditions | Pyrexia Chills Malaise Fatigue Injection site pain Injection site swelling Injection site redness |

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

The safety profile in 545 participants receiving TRADENAME, that were seropositive for SARS-CoV-2 at baseline, was similar to that seen in the general population.^{17,28,31}

4.9. Overdose

Participants who received 58 micrograms of TRADENAME in clinical trials did not report an increase in reactogenicity or adverse events.¹⁸

In the event of overdose, monitoring of vital functions and possible symptomatic treatment is recommended.

5. PHARMACOLOGICAL PROPERTIES

5.1. Pharmacodynamic properties

Pharmacological class, therapeutic class

Vaccines

Refer to the current ATC code index for the appropriate code assignment for the pharmacologic and/or therapeutic class.

Mechanism of action

The nucleoside-modified messenger RNA in TRADENAME is formulated in lipid nanoparticles, which enable delivery of the RNA into host cells to allow expression of the SARS-CoV-2 S antigen. The vaccine elicits both neutralizing antibody and cellular immune responses to the spike (S) antigen, which may contribute to protection against COVID-19 disease.^{19,20}

Efficacy in participants 16 years of age and older

Study 2 is a multicenter, placebo-controlled efficacy study in participants 12 years of age and older. Randomization was stratified by age: 12 through 15 years of age, 16 through 55 years of age, or 56 years of age and older, with a minimum of 40% of participants in the ≥ 56 -year stratum.¹² The study excluded participants who were immunocompromised and those who had previous clinical or microbiological diagnosis of COVID-19 disease.¹² Participants with pre-existing stable disease, defined as disease not requiring significant change in therapy or hospitalization for worsening disease during the 6 weeks before enrollment,²¹ were included as were participants with known stable infection with human immunodeficiency virus (HIV), hepatitis C virus (HCV), or hepatitis B virus (HBV).¹²

In the Phase 2/3 portion approximately 44,000 participants 12 years of age and older were randomized equally and received 2 doses of COVID-19 mRNA Vaccine or placebo separated by 21 days. The efficacy analyses included participants that received their second vaccination within 19 to 42 days after their first vaccination. Participants are planned to be followed for up to 24 months, for assessments of safety and efficacy against COVID-19 disease.^{12,27}

The population for the analysis of the primary efficacy endpoint included, 36,621 participants 12 years of age and older (18,242 in the COVID-19 mRNA Vaccine group and 18,379 in the placebo group) who did not have evidence of prior infection with SARS-CoV-2 through 7 days after the second dose.²² Table 2 presents the specific demographic characteristics in the studied population.

Table 2. Demographics (Population for the Primary Efficacy Endpoint)^{a,22}

| | TRADENAME (N=18,242) n (%) | Placebo (N=18,379) n (%) |
|---|---|---|
| Sex | | |
| Male | 9318 (51.1) | 9225 (50.2) |
| Female | 8924 (48.9) | 9154 (49.8) |
| Age (years) | | |
| Mean (SD) | 50.6 (15.70) | 50.4 (15.81) |

| Min, max | (12, 89) | (12, 91) |
| Age group | | |
| 12 to 15 years | 46 (0.3) | 42 (0.2) |
| 16 to 17 years | 66 (0.4) | 68 (0.4) |
| 16 to 64 years | 14,216 (77.9) | 14,299 (77.8) |
| 65 to 74 years | 3176 (17.4) | 3226 (17.6) |
| ≥75 years | 804 (4.4) | 812 (4.4) |
| Race | | |
| White | 15,110 (82.8) | 15,301 (83.3) |
| Black or African American | 1617 (8.9) | 1617 (8.8) |
| American Indian or Alaska Native | 118 (0.6) | 106 (0.6) |
| Asian | 815 (4.5) | 810 (4.4) |
| Native Hawaiian or other Pacific Islander | 48 (0.3) | 29 (0.2) |
| Other ^b | 534 (2.9) | 516 (2.8) |
| Ethnicity | | |
| Hispanic or Latino | 4886 (26.8) | 4857 (26.4) |
| Not Hispanic or Latino | 13,253 (72.7) | 13,412 (73.0) |
| Not reported | 103 (0.6) | 110 (0.6) |
| Comorbidities^c | | |
| Yes | 8432 (46.2) | 8450 (46.0) |
| No | 9810 (53.8) | 9929 (54.0) |

- a. All eligible randomized participants who receive all vaccination(s) as randomized within the predefined window, have no other important protocol deviations as determined by the clinician, and have no evidence of SARS-CoV-2 infection prior to 7 days after Dose 2.
- b. Includes multiracial and not reported.
- c. Number of participants who have 1 or more comorbidities that increase the risk of severe COVID-19 disease.
 - Chronic lung disease (e.g., emphysema and chronic bronchitis, idiopathic pulmonary fibrosis, and cystic fibrosis) or moderate to severe asthma
 - Significant cardiac disease (e.g., heart failure, coronary artery disease, congenital heart disease, cardiomyopathies, and pulmonary hypertension)

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

- Obesity (body mass index ≥ 30 kg/m²)
- Diabetes (Type 1, Type 2, or gestational)
- Liver disease
- Human Immunodeficiency Virus (HIV) infection (not included in the efficacy evaluation)

Efficacy against COVID-19 disease

At the time of the primary efficacy analysis, participants had been followed for symptomatic COVID-19 disease for at least 2214 person-years for the COVID-19 mRNA Vaccine and at least 2222 person-years in the placebo group.³²

There were no meaningful clinical differences in overall vaccine efficacy in participants who were at risk of severe COVID-19 disease including those with 1 or more comorbidities that increase the risk of severe COVID-19 disease [e.g., asthma, body mass index (BMI) ≥ 30 kg/m², chronic pulmonary disease, diabetes mellitus, hypertension].^{23,24}

The vaccine efficacy information is presented in Table 3.

Table 3. Vaccine Efficacy – First COVID-19 Occurrence From 7 Days After Dose 2, by Age Subgroup – Participants Without Evidence of Infection and Participants With or Without Evidence of Infection Prior to 7 Days After Dose 2 – Evaluable Efficacy (7 Days) Population

| First COVID-19 occurrence from 7 days after Dose 2 in participants without evidence of prior SARS-CoV-2 infection^{*,34} | | | |

Abbreviations: BMI = body mass index; N-binding = SARS-CoV-2 nucleoprotein-binding; NAAT = nucleic acid amplification test; SARS-CoV-2 = severe acute respiratory syndrome coronavirus 2; VE = vaccine efficacy.

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

Table 5. Vaccine Efficacy – First COVID-19 Occurrence From 7 Days After Dose 2, by Risk Status – Participants Without Evidence of Infection Prior to 7 Days After Dose 2 – Evaluable Efficacy (7 Days) Population²³

| Efficacy Endpoint Subgroup | TRADENAME N ^a =18,198 | Placebo N ^a =18,325 | Vaccine Efficacy % (95% CI ^e) |
|----------------------------|---|---|--|
| | Cases n1 ^b Surveillance Time ^c (n2 ^d) | Cases n1 ^b Surveillance Time ^c (n2 ^d) | |

Note: Subjects who had no serological or virological evidence (prior to 7 days after receipt of the last dose) of past SARS-CoV-2 infection (i.e., N-binding antibody [serum] negative at Visit 1 and SARS-CoV-2 not detected by NAAT [nasal swab] at Visits 1 and 2), and had negative NAAT (nasal swab) at any unscheduled visit prior to 7 days after Dose 2 were included in the analysis.

- a. N = number of participants in the specified group.
- b. n1 = Number of participants meeting the endpoint definition.
- c. Total surveillance time in 1000 person-years for the given endpoint across all participants within each group at risk for the endpoint. Time period for COVID-19 case accrual is from 7 days after Dose 2 to the end of the surveillance period.
- d. n2 = Number of participants at risk for the endpoint.
- e. Confidence interval (CI) for VE is derived based on the Clopper and Pearson method adjusted for surveillance time.
- f. At risk is defined as having at least 1 of the Charlson Comorbidity Index (CMI) category or obesity (BMI ≥ 30 kg/m²).
- g. Obese is defined as BMI ≥ 30 kg/m².

Efficacy against severe COVID-19

Secondary efficacy analyses suggested benefit of the COVID-19 mRNA Vaccine in preventing severe COVID-19.

Efficacy against severe COVID-19 (as defined by the study protocol*) occurring after the first dose was 88.9% (95% CI: 20.1, 99.7) (1 case in COVID-19 mRNA Vaccine group and 9 cases in placebo group), with an estimated vaccine efficacy of 75.0% (95% CI: -152.6, 99.5) (1 case in COVID-19 mRNA Vaccine group and 4 cases in placebo group) against severe COVID-19 occurring at least 7 days after Dose 2.³⁶

**Severe illness from COVID-19 is defined by the study protocol as confirmed COVID-19 and presence of at least 1 of the following:*

- *Clinical signs at rest indicative of severe systemic illness (respiratory rate ≥ 30 breaths per minute, heart rate ≥ 125 beats per minute, saturation of oxygen $\leq 93\%$ on room air at sea level, or ratio of arterial oxygen partial pressure to fractional inspired oxygen < 300 mm Hg);*
- *Respiratory failure [defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or extracorporeal membrane oxygenation (ECMO)];*
- *Evidence of shock (systolic blood pressure < 90 mm Hg, diastolic blood pressure < 60 mm Hg, or requiring vasopressors);*
- *Significant acute renal, hepatic, or neurologic dysfunction;*
- *Admission to an Intensive Care Unit;*
- *Death.*

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

Efficacy against severe COVID-19 which is defined (by the Centers for Disease Control and Prevention) as hospitalization, admission to the Intensive Care Unit, intubation or mechanical ventilation, or death occurring after the first dose was 92.9% (95% CI: 53.2, 99.8) (1 case in COVID-19 mRNA Vaccine group and 14 cases in placebo group).³⁷

5.2. Pharmacokinetic properties

Not applicable.

5.3. Preclinical safety data

Non-clinical data reveal no special hazard for humans based on conventional studies of repeat dose toxicity and reproduction and developmental toxicity.^{10,11}

6. PHARMACEUTICAL PARTICULARS

6.1. List of excipients^{2,3}

(4-hydroxybutyl)azanediylbis(hexane-6,1-diyl)bis(2-hexyldecanoate) (ALC-0315)

2-[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide (ALC0159)

1,2-Distearoyl-sn-glycero-3-phosphocholine (DSPC)

Cholesterol

Potassium chloride

Potassium dihydrogen phosphate

Sodium chloride

Disodium hydrogen phosphate dihydrate

Sucrose

Water for injections

6.2. Incompatibilities

This medicinal product must not be mixed with other medicinal products except those mentioned in Sections 6.3 and 6.6.

6.3. Shelf life

Unopened vial

6 months at -90 °C to -60 °C.

Once removed from the freezer, the unopened vaccine can be stored for up to 5 days at 2 °C to 8 °C, and up to 2 hours at temperatures up to 30 °C, prior to use.

Once thawed, the vaccine should not be re-frozen.

Closed-lid vial trays containing 195 vials removed from frozen storage (<-60 °C) may be at room temperature (<25 °C) for up to 5 minutes for transfer between ultra-low-temperature environments. After vial trays are returned to frozen storage following room temperature exposure, they must remain in frozen storage for at least 2 hours before they can be removed again.

Diluted medicinal product

Chemical and physical in-use stability has been demonstrated for 6 hours at 2 °C to 30 °C after dilution in sodium chloride 9 mg/mL (0.9%) solution for injection. From a microbiological point of view, the product should be used immediately. If not used immediately, in-use storage times and conditions are the responsibility of the user.

6.4. Special precautions for storage^{2,25}

Store in a freezer at -90 °C to -60 °C.

Store in the original package in order to protect from light.

During storage, minimize exposure to room light, and avoid exposure to direct sunlight and ultraviolet light.

Thawed vials can be handled in room light conditions.

When you are ready to thaw or use the vaccine

- Open-lid vial trays, or vial trays containing less than 195 vials removed from frozen storage (<-60 °C) may be at room temperature (<25 °C) for up to 3 minutes to remove vials or for transfer between ultra-low-temperature environments.
- Once a vial is removed from the vial tray, it should be thawed for use.
- After vial trays are returned to frozen storage following room temperature exposure, they must remain in frozen storage for at least 2 hours before they can be removed again.

Transportation

If local redistribution of unopened vials is needed, and full trays containing vials cannot be transported at -90 °C to -60 °C, available data support transportation of 1 or more thawed vials at 2 °C to 8 °C for up to 12 hours. Any hours used for transport of unopened vials at 2 °C to 8 °C count against the 120-hour limit for storage at 2 °C to 8 °C.²⁹

If local redistribution of diluted medicinal product in vials or syringes is needed, available data support physical and chemical stability during transportation between 2 °C and 30 °C for up to 6 hours. Any hours used for transport of diluted medicinal product in vials or syringes at 2 °C to 30 °C count against the 6-hour limit for storage at 2 °C to 30 °C. Microbiological risks, particularly for prepared dosing syringes, are the responsibility of the preparer during transportation of diluted medicinal product.³⁰

For storage conditions after thawing and dilution of the medicinal product, see Section 6.3.

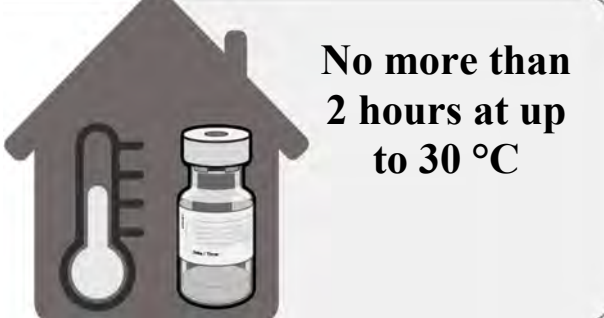

6.5. Nature and contents of container

Information to be provided by local subsidiary.

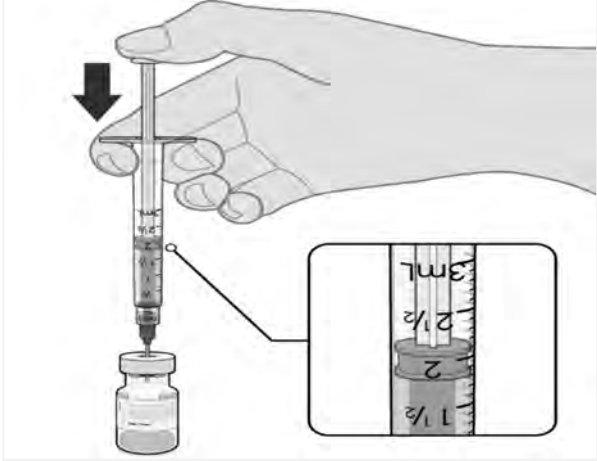

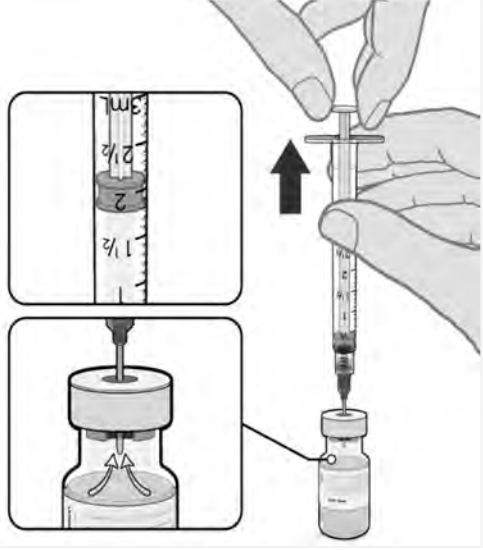

6.6. Special precautions for disposal and other handling^{2,3,26,35}

Handling instructions

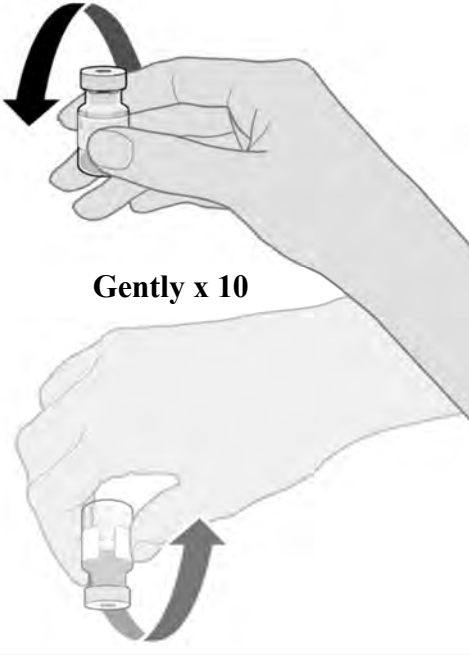

TRADENAME should be prepared by a healthcare professional using aseptic technique to ensure the sterility of the prepared dispersion.

| THAWING PRIOR TO DILUTION | |
|---|---|
|  <p>No more than 2 hours at up to 30 °C</p> | <ul style="list-style-type: none">• The multidose vial is stored frozen and must be thawed prior to dilution. Frozen vials should be transferred to an environment of 2 °C to 8 °C to thaw; a 195 vial pack may take 3 hours to thaw. Alternatively, frozen vials may also be thawed for 30 minutes at temperatures up to 30 °C for immediate use.• Allow the thawed vial to come to room temperature and gently invert it 10 times prior to dilution. Do not shake.• Prior to dilution, the thawed dispersion may contain white to off-white opaque amorphous particles. |

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

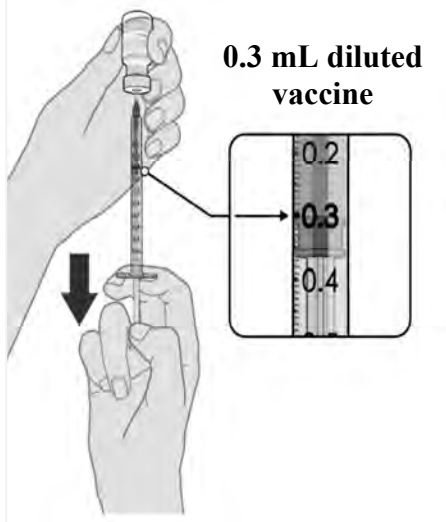

| DILUTION | |
|--|--|
|  <p>1.8 mL of 0.9% sodium chloride injection</p> | <ul style="list-style-type: none">• The thawed vaccine must be diluted in its original vial with 1.8 mL sodium chloride 9 mg/mL (0.9%) solution for injection, using a 21 gauge or narrower needle and aseptic techniques. |
|  <p>Pull back plunger to 1.8 mL to remove air from vial</p> | <ul style="list-style-type: none">• Equalize vial pressure before removing the needle from the vial stopper by withdrawing 1.8 mL air into the empty diluent syringe. |

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

| | |
|---|--|
|  <p>Gently x 10</p> | <ul style="list-style-type: none">• Gently invert the diluted dispersion 10 times. Do not shake.• The diluted vaccine should present as an off-white dispersion with no particulates visible. Discard the diluted vaccine if particulates or discoloration are present. |
|  <p>Record appropriate date and time. Use within 6 hours after dilution.</p> | <ul style="list-style-type: none">• The diluted vials should be marked with the appropriate date and time.• Do not freeze or shake the diluted dispersion. If refrigerated, allow the diluted dispersion to come to room temperature prior to use. |

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

PREPARATION OF INDIVIDUAL 0.3 mL DOSES OF COMIRNATY

- After dilution, the vial contains 2.25 mL from which 6 doses of 0.3 mL can be extracted.
- Using aseptic technique, cleanse the vial stopper with a single-use antiseptic swab.
- Withdraw 0.3 mL of TRADENAME.

Low dead-volume syringes and/or needles should be used in order to extract 6 doses from a single vial. The low dead-volume syringe and needle combination should have a dead volume of no more than 35 microliters.

If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial.

- Each dose must contain 0.3 mL of vaccine.
- If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 mL, discard the vial and any excess volume.
- Discard any unused vaccine within 6 hours after dilution.

Disposal

Any unused medicinal product or waste material should be disposed of in accordance with local requirements.

090177e19681e9ed\Approved\Approved On: 13-Mar-2021 06:18 (GMT)

APPENDIX 2.1 Cumulative Number of Case Reports (Serious and Non-Serious, Medically Confirmed and Non Medically-Confirmed) from Post-Marketing Data Sources, Overall, by Sex, Country, Age Groups and in Special Populations and Summary Tabulation by Preferred Term and MedDRA System Organ Class

PF-07302048 - ALL

Reporting Period: Through 28-FEB-2021
Total Number of Cases: 42086 (100%) (ALL) / 42086 (OVERALL)
Total Number of Adverse Events (PT): 158893 (ALL)

NON CT

Total Number of Cases: 42086
Total Number of Adverse Events (PT): 158893

090177e19681e9ed\Approved On: 13-Mar-2021 06:18 (GMT)

| Preferred Term | System Organ Class (SOC) | Number of Cases |
|---------------------------|--|-----------------|
| Headache | Nervous system disorders | 10131 (24.07%) |
| Pyrexia | General disorders and administration site conditions | 7666 (18.22%) |
| Fatigue | General disorders and administration site conditions | 7338 (17.44%) |
| Chills | General disorders and administration site conditions | 5514 (13.10%) |
| Nausea | Gastrointestinal disorders | 5182 (12.31%) |
| Vaccination site pain | General disorders and administration site conditions | 5181 (12.31%) |
| Myalgia | Musculoskeletal and connective tissue disorders | 4915 (11.68%) |
| Pain in extremity | Musculoskeletal and connective tissue disorders | 3959 (9.41%) |
| Dizziness | Nervous system disorders | 3720 (8.84%) |
| Pain | General disorders and administration site conditions | 3691 (8.77%) |
| Arthralgia | Musculoskeletal and connective tissue disorders | 3525 (8.38%) |
| Malaise | General disorders and administration site conditions | 2897 (6.88%) |
| Asthenia | General disorders and administration site conditions | 2285 (5.43%) |
| Drug ineffective | General disorders and administration site conditions | 2201 (5.23%) |
| Dyspnoea | Respiratory, thoracic and mediastinal disorders | 2057 (4.89%) |
| Lymphadenopathy | Blood and lymphatic system disorders | 1972 (4.69%) |
| COVID-19 | Infections and infestations | 1927 (4.58%) |
| Diarrhoea | Gastrointestinal disorders | 1880 (4.47%) |
| Vomiting | Gastrointestinal disorders | 1698 (4.03%) |
| Paraesthesia | Nervous system disorders | 1500 (3.56%) |
| Pruritus | Skin and subcutaneous tissue disorders | 1447 (3.44%) |
| Rash | Skin and subcutaneous tissue disorders | 1404 (3.34%) |
| Cough | Respiratory, thoracic and mediastinal disorders | 1146 (2.72%) |
| Tachycardia | Cardiac disorders | 1098 (2.61%) |
| Erythema | Skin and subcutaneous tissue disorders | 1044 (2.48%) |
| Hypoesthesia | Nervous system disorders | 999 (2.37%) |
| Oropharyngeal pain | Respiratory, thoracic and mediastinal disorders | 948 (2.25%) |
| Vaccination site erythema | General disorders and administration site conditions | 930 (2.21%) |
| Vaccination site swelling | General disorders and administration site conditions | 913 (2.17%) |
| Hyperhidrosis | Skin and subcutaneous tissue disorders | 900 (2.14%) |
| Off label use | Injury, poisoning and procedural complications | 880 (2.09%) |
| Urticaria | Skin and subcutaneous tissue disorders | 862 (2.05%) |
| Influenza like illness | General disorders and administration site conditions | 835 (1.98%) |
| Product use issue | Injury, poisoning and procedural complications | 828 (1.97%) |
| Back pain | Musculoskeletal and connective tissue disorders | 809 (1.92%) |
| Feeling abnormal | General disorders and administration site conditions | 787 (1.87%) |

APPENDIX 2.5.1: Cumulative and Interval Summary Tabulation of Serious and Non-Serious Adverse Reactions From Post-Marketing Data Sources Organized per MedDRA System Organ Class by Preferred Term per Country

Cumulative Reporting Period: Through 28-FEB-2021

Interval Reporting Period: 01-FEB-2021 Through 28-FEB-2021

Total Number of Cases: 23,558 (Interval) / 42,086 (Cumulative)

Total Number of Adverse Events (PT): 91,739 (Interval) / 158,648 (Cumulative)

MedDRA Version: v.23.1J
